

THIS WORK IS BASED ON THE PRINCIPLE THAT MIND UNDERLIES ALL FORMS OF LIFE

IT IS THE COMBINATION OF MANY GREAT SCIENTISTS, INNOVATORS, PHILOSOPHERS AND MATHEMATICIANS. A SYNTHESIS OF SOME OF THE GREATEST THEORIES OUT THERE, THAT SEEM TO ALL FIT TOGETHER WHEN THE TWO BASIC PREMISES, 1) THERE ARE TWO REALMS OF EXISTENCE THAT HUMANS AND OTHER LIFE FORMS CONSTANTLY EXPERIENCE [MIND AND MATTER] AND 2) DNA IS A MOLECULAR STRUCTURE THAT ENABLES MIND TO COMMUNICATE WITH MATTER, USING VORTICAL FIELDS THAT ARE GENERATED BY THE PHYSICAL STRUCTURE OF THE MOLECULE AND WHICH CREATE A TWO WAY FLOW OF ENERGY AS SEEN IN TORNADOES AND WHIRLWINDS

THERE IS THE INTRODUCTION THAT SETS OUT TO ESTABLISH AND ENABLE THE OPEN MIND TO TAKE ON BOARD NEW RELATIVELY UNCONVENTIONAL IDEAS, THEN A SORT OF STRUCTURED EXPLANATION AND FINALLY A MIXTURE OF ESSAYS ON THE SUBJECT....

MINDISM a Synopsis

Bringing Mind back into the conversation and producing a single unifying explanation of existence, how it manifests and why we experience it.....

The physical bodies of animals including primates and other mammals have sense organs that collect information from their immediate environment which enables the individual to navigate through that environment and interact with it accordingly.

Survival within that environment is probably the main reason for these senses to have evolved, sound, vision and for many species, smell, are most helpful in determining potential dangers and sources of food. Taste and touch are also important sources of information that is sent to the brain for processing. The major senses detect information from the external environment, we also have senses that collect information from the internal physical environment of the body, such as temperature, blood pressure, stretch receptors and pH regulation.

We detect, light and movement, sounds, molecules in the air, wind, rain, temperature and other natural effects that the environment produces. The specialised receptors that have evolved to collect the information and send it to the brain, have evolved because the information was already out there. The senses developed as a response to the information in the environment so that the organism could collect more information and enable its chances of survival to increase. The information was out there billions of years ago before any life forms appeared on this planet, it did not become information subsequent to lifeforms appearing on the planet.

Generally, one can consider that information is synonymous with energy. Energy exists as waveform frequencies, information interacts in the same way as energy does, ie. dialectically. Two things coming together to produce an outcome. $A + B = C$, maybe A and B do not interact, in which case $A + B = A + B$, maybe A + B combine to form a single entity, C or maybe A + B combine to produce two or more products, in which case C is actually more than a single entity.

This is the basis of how energy and information interact. It is also, as I understand it, the basic working of Mind and all mental and physical processes. A, B and C can easily be represented as numbers. Hence Pythagoras's statement that 'all things are numbers'... and mathematics is the 'language of the universe'.

Plato, amongst others, stated that there is another realm of existence that is not physical, this was taken further by Leibnitz, who proposed a system of existence that incorporated both realms of existence, ie. physical and mental, and attempted to prove this mathematically. However, despite his genius enabling calculus to be revealed, it would take further development of his mathematical accomplishments to produce quantum physics, which makes it apparent that there are indeed two realms of existence and living organisms experience both of them.

There is a physical realm of matter, 'solid bodies', it is the dimensional world of SpaceTime that our senses perceive. There is also a mental realm of waveform frequencies that is outside SpaceTime, a non

dimensional realm outside SpaceTime and beyond comprehension, beyond our everyday ability to consider its existence to be real. However, mathematics is the language of AbsoluteTruth, and we have to rationally concede that the amount of information that we can collect using sophisticated technology, overwhelmingly demonstrates that there is far more to life than meets the eye.

This work is an attempt to get the reader to consider in greater depth that we exist within two realms of existence, Mind and Matter. Our mind is mental, and our body is physical. This work also outlines quite feasible scenarios enabling DNA to be engineered by intelligence inherent in Mind maybe 3 billion years ago or so. Also, for single cells to have manifested as a direct result of physical matter interacting with other physical matter, governed by the Laws of Physics, it is worth at least some consideration that there is not only intelligent design but also a purpose and reason for the apparent evolutionary development that ensued. All physical interaction is measurable and is by definition, dimensional. Information/energy cannot be directly measured, it has to interact with something physical in order for it to be quantified and labelled, [eg. Kinetic energy, temperature, pressure]. Physical interaction occurs in SpaceTime and 'takes time'... Mental interaction is outside Spacetime and is instant. If you are shown a photo of when you were younger, the information in the picture takes your memory straight to that point in time without needing to scroll through all the previous years of data collection.

So, in this work you will be presented with a rational explanation of abiogenesis, ie. how life began, and also an explanation of what life is..... [ultimately, for us humans, it mainly comes down to matters of definition because we use words to communicate and facilitate our understanding of the world.]

Also there is an outline of Leibnitz's Monadic Theory, Leibnitz, like Tesla and many others, was way ahead of his time and his monadic theory enables most information that 'science' proffers, to fit within that theory. Part 2 of the work presents simple mathematical data that makes it plain to see that Leibnitz was almost certainly correct in his reasoning.

So why has no one else put forward this grand unified explanation of everything? Well, you would need to have encountered The Works of Viktor Schauberger, combined them with Euler's Formula and Leibnitz's Monadic Theory whilst at the same time running them in parallel with an understanding of genetics, molecular and cell biology. All that information and more, 'viewed' within a rational philosophical framework, when processed with the intention of producing coherent, concordant explanations, facilitate clarity. Clarity is what the 'mind's eye' requires to produce 'understanding'... Understanding enables the mind to progress towards the next level. Sufficient understanding enables the mind to 'reach' the next level.

I listen to and read a lot of eminent people discussing behaviour, brain and life processes, for some reason they are almost embarrassed to use the word 'mind' and yet it is usually the most appropriate term. We have had it drummed into us that intelligence is within the brain, and yet it is demonstrated time and again that single cell organisms display intelligent behaviour. We have also been indoctrinated to use the term 'mind', as little as possible. Until the arrival of the 20th century, psychology was the study of Mind and Soul.

This work explains why it is inappropriate to consider intelligence to be located within the brain. If the brain is dimensional and mind is its corresponding non dimensional form, then understanding behaviour becomes somewhat easier. Despite the phenomenally complex levels of information exchange and decision making processes involved, recognizing the phenomenal intelligence that has evolved within

Mind makes it easier to visualize how this super/hyper complex decision making process evolved and why we have become so nonchalant within our own personal little bubble of perception.

In truth, Mind is far more layered and complex a concept than just being a mental aspect of the brain. The more one contemplates the existence of Mind the more necessary it really is to have a conventionally accepted range of terms to define various aspects of this all encompassing form of existence. This work is designed to enable people to open discussion and facilitate our understanding of the world we experience.

If you want to maintain a belief that intelligence and mind is inherent within the brain and the present convention is most correct, then don't read this book.

AA This work is not an opinion.

It is the culmination of decades of study and analysis of information collected from books, documentaries, interviews, talks, scientific journals. It takes the hypotheses and conclusions of great Minds like Plato, Pythagorus, Leibnitz, Euler and Schauberger and applies current scientific theories to these great ideas to produce what is hopefully a useful tool for many folk to use to further their understanding of Life, Self and Everything.....

A fair amount of information from the Internet, which I use for cross reference and verification, has also been incorporated into this work.

I have learnt to reject belief (see section on belief systems) and have found that slowly, a form of intuitive understanding has developed as the amount of information acquired enhances clarity and enables the rational mind to become more efficient in data processing.

This work is intended to bring Mind back into the language of understanding.... It has been replaced by the word 'brain' which indoctrinates and creates a paradigm and mindset that restricts our ability and limits our chances of being able to develop clarity so that a true picture of reality can develop. And of course, it will develop in the mind, not the brain... intelligence predates brains... single cell organisms behave in a highly intelligent and organized manner and yet they have no brain... this work explains how this can be... and it is mind, that determines everything...

Mind has various layers and aspects to its total existence. There are individual minds and there is a collective too... it manifests in various forms which are all, ultimately aspects of total existence... This work attempts to explain, in a regular step by step, and also in a somewhat disjointed manner, how it all fits together.

There are only two dimensions, one is Dimensional Realm of SpaceTime and the other is the Non Dimensional Mental Realm of Waveform Frequencies which are themselves emanations from Plenum that is The Monadic Soul Collective.

Dimensional SpaceTime can be represented graphically using the x, y and z axis. Positive numbers represent Space, and eg, we use that facility for locating places using GPS coordinates. Negative numbers represent Time, hence the square root of -1 [i, The Imaginary Number], is so important in so many mathematical calculations. The square root of minus numbers, when combined with whole numbers, are called 'Complex Numbers'. They relate to Time, which is itself a linear measurement of movement through space. Complex numbers are a part of Complex Geometry...and here I start to lose the full understanding of the concepts involved... Complex Geometry was spun into 'sacred geometry', for me, that is a bullshit term of no real meaning...we are presented with many of them nowadays... here we enter the world of politics and more... and we are not going in that direction with this work...so.. back to reality....

Read on...

- A --- A theoretical explanation of mind and its structure..
-
- The concept of Mind was forced out of the realm of science by the introduction and development of scientific materialism which was gaining momentum from at least the early nineteenth century. In the 1870's a significant move was made to expedite this alteration of perspective and cloud understanding.

In 1873 one of Britain's greatest scientists, William Crookes performed repeatable experiments demonstrating the continuity of life after death. The following year, a French Nobel scientist stated that he could confirm the authenticity of this claim, he was pioneering the definition of terms in the field of Metaphysics. Up until that point in time, psychology was defined as the study of Mind and Soul. The following year 1875, a German psychologist, Wilhelm Wundt, stated that we are flesh and blood and that when we die, that is that, nothing else happens. The Rockefeller Foundation supported Wundt financially to the tune of 25 million dollars until the end of the century. Students from America were sent to study under his guidance, returning to preach his gospel. This extended to Europe and the paradigm shift was completed with the publication of the First American Journal of Psychology in 1917. One of Wundt's earliest students was Pavlov, made famous for his experiments on dogs and the concept of Operant Conditioning. Behaviour control using drugs as the prime treatment for abnormal mental states was introduced.

Subsequent to Crookes's experiments, a law was passed in England making it illegal to talk about them. Crookes was also working on the development of the cathode ray tube (as found until relatively recently in all televisions). His intention was to use electrons to project images of spirits onto a screen. Subsequently he went on to become Sir William Crookes, and by 1899, he was head of the prodigious and esteemed Royal Society. He is stated to be one of Britain's greatest geniuses.

The beginning of the 20th century saw scientific materialism in full swing and Mind went down the plug hole with the bath water. Repeatedly through history it has been stated that if you tell a lie often enough it will become the truth. There is no organ in the body for detecting Truth, Conscious Self is dependent on the information presented to it, in order to verify its authenticity it depends on previous information and its source. If the source is presented as a most eminent and unquestioning authority then the individual will most likely accept that information to be true.

This basic fact has been used to manipulate knowledge and consciousness for thousands of years. The process of informing and introducing new information, (sometimes referred to as education) determines what people can know and understand. Until the introduction of the Internet, we were all at the effect of this limiting process. Where you were born and into which family would generally determine your future understanding and experience. The concept of 'bread and circus' dates back at least two thousand years and was documented by the Romans. Give the people food and entertainment and they will almost all, accept anything they are told.

The SoulMind requires accurate information to facilitate its journey. Inaccurate information restricts development of mind and sometimes body, arrested and dysfunctional development manifests and the individual suffers accordingly. The more inaccurate and imbalanced the information flow, the more dysfunctional the behaviour of Mind with accompanying impairment of understanding. Functional, healthy development, both physical and mental starts in the womb, impairment at any stage will affect subsequent development. Malnutrition, physical damage and the interruption of the natural developmental phases of brain development in the infant and child will manifest mental aberrations accordingly. Cognitive skills become arrested and dysfunction, either mild or severe, will develop in time.

So, we can only fully develop an understanding of our environment and the world around it by having an input of accurate information and an ability to process it in a mental environment that is able to cope with, learn and respond efficiently to the input. Stress, distress, emotional turmoil and discord of any kind will impair this natural process of mental activity and development. A loving, caring, warm supportive environment enables the mind of the child to develop in leaps and bounds and realising the mind's potential is facilitated. Learning never stops, adolescence is a turbulent time for most and mental development at this stage of growth also needs to be as balanced as possible. Incorrect information introduced earlier in life will disaffect accordingly. Control the information flow and look what society can produce today. More than one hundred trillion cells all containing an identical content of XX or XY chromosomes with allegedly 6,500 associated molecular behavioural differences, and apparently your daughter is in fact your son.

Seeing is believing we were told. Believing is deceiving. One has to rationalise truth. Definition of terminology is paramount, it defines our understanding and enables clarity to manifest....ill definition and misinformation confuses us immensely. I write to be understood, different minds have different levels of understanding. The ability to understand is dictated by three factors, our genetics, our environment and our SoulMind.

That is all we are....a physical body whose structure is determined by our genetic complement interacting with its environment directed and controlled by the SoulMind.

This dictates embryonal and foetal development from conception. A phenomenally complex sequence of events, programmes that have been slowly developed over billenia, from the advent of the first communications between minds in the mental non dimensional realm outside spacetime and physical molecular structures in the material dimensional realm of spacetime. The evolution and development of the single cell and its organelles with an

accompanying mental development, ie. the evolution of awareness of internal and external environment and the interplay of affect and effect. From prokaryotes to eukaryotes, from single cell organisms to multicellular organisms. Differentiation and the development of individual organs within the organism with accompanying mental development and complexity. The evolution of control and communication within the single cell. The evolution of control and communication within the multicellular organism (both physical and mental). The evolution of control and communication, between multicellular organisms (both physical and mental). The journey of the Soul and the Mind it contains. From alpha to omega, from Totally Unconscious to Fully Conscious, from ignorance to divinity, from being nothing to becoming a god, from zero to infinity.

We are not what words attempt to define us as, we are only human by definition, we are all extensions of SoulMind experiencing a physical existence. Life manifested from existence, according to Leibnitz (and the rational mind), there are First Causes, Existants.... That word sounds like existence.... According to Hindu lore, Om was the first Sound.... A vibration that sounds like existence... The 'voice' of an Existant?

Within all religions and belief systems there are Elements of Truth. The physical realm is constructed of elements, the mental realm is a construct of mathematical Truths. Mathematical Truths are wave form frequencies which, through a process of continuous combination become unimaginably complex. The physical realm is contingent, the mental realm is Absolute.

The future exists to enable the 'scientific' mind to prove its own existence, to deny the existence of mind is not healthy, it's not rational.... I think therefore I am..... (Should that read, I think therefore I exist?)

Thinking is the continuous flow of information interacting with information that constitutes the mind. Thinking is a manifestation of intelligence and intelligence is a manifestation of thinking.

Awareness precedes consciousness, the physical realm manifested from a Singularity, everything is linear as represented by the circle and the symbol of infinity.

The symbol of the dot within a circle represents both the infinite circle and the circle of infinity, at the same time. An aeon is the time it takes from the beginning of time, the Big Bang, until the end of time, the Big Crunch. It represents 'good infinity', the Phoenix rises from the ashes, a new cycle of 'good infinity' occurs..... A Big Bang, a new aeon, life will manifest, again time will end with the actualisation of all individual SoulMinds having achieved 'Godhead', all SoulMinds fully illuminated, The Mind of God will manifest, all energy/information has returned to the mental realm, a Big Crunch occurs, a new cycle of 'good infinity' occurs..... And so on and so onand now you can understand what 'bad infinity' is..... It is the definition of 'Forever'.

Existence is the constant interplay between dimensional and non dimensional informational energy. . All information is energy and all energy is information. Information exists, it is the product/life force of an Existant, a Soul. Interacting information manifests a Mind from within a Soul. The SoulMind. All definition is human and my Mind in all its levels/layers from Soul to Conscious Self, define Existence as manifesting from Existants, of which my Soul is one.

A singularity is a soul. The supersingularity represents all souls. They are non dimensional. The supersingularity is 'The Singularity' that manifests the physical realm...dimensional reality beyond how we humans perceive it.

And so I make an attempt to begin to explain the super inherent complexity of mental processes. More time, consideration and thought is necessary along with a conventionally accepted definition of terms. Greater minds than mine are required for this. Eskimos

have more than 20 words describing snow...let's have a few more words describing Mind and its mental attributes.

Mind has no physical attributes, nothing solid, nothing relatively solid and its structure is a structure of form not shape. It has evolved and 'grown' over time and consequently understanding its activity requires a basic understanding of evolutionary anatomy and physiology coupled with the genetic processes that correspond to the manifestation of this physical evolutionary development.

For example, in humans certain anatomical neuronal pathways in the brain demonstrate this evolutionary aspect. The hypothalamus is one of the most important regions of our lower 'reptilian' brain.

Neural pathways to it should be as direct as and short as possible. It takes time for information to flow along axons that connect one neuron to another. Time is survival. However, in the Limbic system, the part of the brain that deals with emotional stuff, some neuronal pathways seem ridiculously long. Why? Because they appeared much later in evolutionary development. Consequently they had to route around already existing structures. To put it another way, if you plan to build a new road to connect area A with area M in an already built up city, you cannot just bulldoze all the existing structures between them just to produce the shortest distance needed to be travelled between the two points, a careful consideration of design and planning is necessary, and a circuitous route will be built. The same occurs in the brain and lesser extent in the body.

Understanding the evolutionary processes helps understand mental processes, *bear in mind that each part of the physical body has a corresponding mental body. As above so below.* The homunculus is a term referring to a physical mapping of our body and can be found in various physical structures of it, for example, the foot, the eye and the ear have the full bodymap in their structure.

What this tells us is that mind has evolved in concert with body.

Consideration of mind being the realm of mental processing of

information and decision making, facilitates an understanding of mental conflict within human mind and behaviour.

A collection of neurons all programmed to behave in a specific way will make the same decisions when processing incoming information relayed to them by their dendritic connections to other neurons. Primary input is from sensory neurons either in the brain monitoring physiological status such as hormone levels, or located in the body such as vision, sound and temperature. These groups of neurons are likely to have been, back in the day, a single neuron performing a similar but more simple task.

What are we certain of about mind? What do we know for sure? Very little. We have to marry this with what we experience as human beings.

Consider a SoulMind that is connected to an individual physical body. It controls the physical body using Will, a mental force that determines physical responses with the cell body and subsequently the physical multicellular body. That this process occurs is already due to a billionia of mental evolution and development. The mind that is evolving is a mental product of the Soul's inherent activity. It has a place where it stores memories. It has nondimensional existence. The physical body that it is connected to, lives and dies, the SoulMind is a constant, and free from its previous incarnation, it now seeks another one to continue its learning journey... The mental projection of SoulMind that back in the day would be a primitive version of SpiritMind (see below) has continuous existence. If the species were to be wiped out by environmental factors, what would happen to these SoulMinds with their mental projections of existential existence.? Conjecture... Some reconsider and manage to connect with other SoulMinds, share information and generate new species accordingly, others reconsider and attempt to use other physical bodies for their experiences of the dimensional realm. This is a feasible explanation for the manifestation of non dimensional interference in the dimensional realm. Daemons, genies

etc... Many Islamic scientists today consider the involvement of Jinis in physical stuff, it should not be outrightly rejected, the more open the mind, the more the consideration of the unconventional. More to the point, a primitive collection of cells combine their activities, in the brain they are referred to as nuclei. If you want to move one finger, first a group of nuclei in the brain tells all fingers to move. It is an early established evolutionary pathway. Then another more recent bunch of nuclei inhibit the movement of the four digits you don't want to move. Parts of the brain produce conflicting messages. Consequently, so does the mind. As a representation of mental processes, there is mental conflict. They could be considered to be subminds, having an existence of their own and also sometimes needing to work with other subminds in the same body to ensure its survival. For physical movements, this is relatively basic. For more complex activities and behaviours, this conflicting aspect of mental modelling can give rise to a whole range of mental dysfunctions. Our brain, particularly the frontal cortex, is at the effect of just how many different subminds attempting to assert their 'ideas'?...ie basic actions they have been programmed to perform. One could consider Will to be a 'Sufficient Force of Intention' that crosses the threshold level necessary to manifest either awareness of potential intention and/or a physical response. A submind attempting to assert its 'idea' into conscious self and transform it into a behaviour response is 'willing it' to occur. Subminds create mental conflict within the subconscious mind.

The most superficial aspect of Mind is Conscious Self. Conscious Self is a mental construct. The individual organism's physical structure and life processes are monitored and controlled non dimensionally since life first appeared on the planet. The intelligence inherent in the mind of the individual monitors and controls. The more evolutionary primitive the organism, the less evolved its brain

and the less evolved its understanding of its environment. Earlier in evolution, before the creation of the neuron, the concept of 'intelligence being inherent in the brain' cannot exist. (Logic, if the brain is an assembly of neurons then its most primitive form will be the single neuron). Neurons were engineered to send information through the physical multicellular body of the organism.

Intercellular communication: neurons in the human brain have thousands of 'wires'/dendrites collecting information from surrounding cells, this information is relayed to the cell body where the DNA is located. Here within the DNA, the information is vortexed to the mind, processed and the resulting decision is relayed back to the DNA. Neural plasticity enables many of these dendritic wirelike connections to be absorbed back into the cell and new connections built as required. These decisions are all made in the mental realm of mind, disconnecting old unused pathways, dissolving and recycling the materials and then building and establishing new more useful pathways is an example of neural plasticity resulting from the mental control of the procedure within the memory of SoulMind.

The human physical body collects information from the environment with what we refer to as 'the senses'. Information input, we define as sight, sound, balance, vibration, smell, touch and taste are relayed to the brain via neurons with specifically evolved receptors designed to collect specific electromagnetic frequencies. The neurons in the brain relay this information to the mind which processes it and responds accordingly. This is a sophisticated process which has become super efficient over the millennia. Often, pathways and responses have been designed to barely involve the mind and physical responses are generated directly by the brain, hormones may be released, signals may be sent to muscles or other parts of the body. The autonomic nervous system is part of a self controlling mechanism that bypasses a lot of mental processing, it is energy and time efficient, the SoulMind monitors and as long as all

is working well it does not need to intervene. After all, it set up these systems in the first place... However... Conscious self is unaware of these processes and we have learnt to pay little attention to the first signs of imbalance and the ill health that can ensue. Conscious Self is all that we are aware of with certainty.... we think...we act... we think we know what is right and wrong, good and bad etc etc. We constantly delude ourselves with our beliefs based on little but here say and information transmitted to us by our fellow humans...

Conscious self is at the effect of the information presented to it. We are potentially vulnerable to those who want to dominate and control us. Our parents, our siblings, our neighbours, our partners and all those other people that we do not know. All of these different people have their own agendas, and underlying the process of us trying to understand the world we are growing up into, we have our own agendas. Some conscious and some not. Some at the direct effect of our biology, some at the effect of our environment, some at the effect of the genetic programming that our DNA determines, some at the effect that our DNA predisposes us to. The complexity is immense... However it has built up over the billions from relatively simple building blocks. And, the relatively simple building blocks of molecular structure (dimensional) and wave form frequency information (non dimensional) are themselves most complex in their structure and form.. However, deconstruct these building blocks and then we have the relatively basic forms and components of structure (dimensional), mind (non dimensional), and life (the interplay between the two).

Material physical (dimensional) matter, ie atoms and the electrons, protons and neutrons that they are comprised of, are bodies of condensed energy formed/fused by the forces manifesting from the Big Bang. Consequently, the original components of life are forms of energy, mental waveform frequencies. Deconstruct them and you will have the building blocks of existence. The most simple

waveform frequencies are generated continuously by the First Causes, Monadic Souls....

To attempt to construct a mental vision of these forms that is rational enough to completely fit and concordantly resonate with ones intuitional rationale, we have to incorporate the scientific statements and findings of today's knowledge with this mind's eye view. Otherwise we are just constructing a mental picture to suit our own worldview, not a good idea if one wants to assist the journey of the soul and enable and facilitate other souls with their journey. This is the spiritual path..

Let's start with the Monadic Soul, the 'centre', the zero within which everything holographically exists....

Mind has evolved layers/strata that encircle the Monadic Soul. To be more accurate, there is a fundamental interplay of simple basic waveform frequencies (which, if numbers were assigned to them, would lay down the basic statement by Pythagorus that 'all things are numbers'. ie. Most simple frequency =1, next one =2 and so on...). This interplay of frequency/energy creates the mathematical laws. Waveform frequencies (wff) either interact or they don't. They will either share some energy/information or they won't. If they share then the interaction will produce various outcomes according to the basic energy/information contained in the wff.

Here the simple principles start to generate more complex outcomes, the outcomes are dependent on the two wffs information/energy components. Maybe the result of interaction between two wffs will be one subsequent wff., maybe it will produce two different ones, maybe three or more wffs result from the interaction of the two original wffs.... the result can be subtractive or additive... Remember this is at the virtual centre of the Monadic Soul. Virtually, but not totally beyond conceptualisation and understanding of Mind. After all, Mind is a resultant of this most basic energy/information interaction in a realm beyond conceptualisation and understanding. The realm of First Causes.....

In Kabbalistic terms, probably the 'Ayn' from which flows the 'Aynsof'. The realm of mind and its subsequent constructs manifest from this original out pouring from the Aynsof, which itself is a product of Ayn. In conventional scientific terms, the singularity expands to become the 'supersingularity' from which all matter manifests.

Mind manifests as a result of the determined interplay of wffs following paths determined by their basic form and components. The wave form frequency is a flowing point, and the 'point' is a bundle of information that determines the path that the frequency follows. These paths become patterns, these patterns are the fundamental intelligence that is inherent in this mental structure directly associated with its own Soul energy/information generator....I say generator, but in truth it could be perceived as a perpetual motion machine, the information/energy flows out from the 'centre' in all 'directions'. Of course this is a realm outside spacetime, there are no measurements and I use terms that guide the mind to understand its own nature. However, it is rational and concurs with stated scientific statements and mathematical truths and interweaves aspects of religion and 'mysticism', moving us along the continuum from uncertainty towards certainty...

The perpetual motion information/energy generator receives its energy/information from its periphery, it produces and it receives....

The process is continuous as represented by the symbol, infinity.

This endless dance continues even when the Monadic Soul has reached the end of its journey. Total symmetry, total enlightenment. The totally unconscious has become fully conscious....the journey of the soul is complete and Mind has become One with its Monadic Soul. The energy still flows, but it is perfection, it is symmetrical, and it is entirely within itself.

And back to being human.... The evolving Soulmind with its inherent intelligence, is now well on its journey, first engineering single cell organisms, until today when it has engineered probably

the most sophisticated quantum biocomputer to facilitate its journey. The human being is its instrument, its muse. On other planets that facilitate dimensional and non dimensional information/energy exchange, ie life, the journey of the SoulMind is the same but the physical components of the organism's body will be dependent on the materials and molecular building blocks available on that particular planet.

The destination of the journey of the soul is destined to be reached and it is the same, the non dimensional realm is a plenum of monadic souls. The dimensional physical realm varies according to location, it's just a matter of time and space.

Within the mind, positive waveforms balance negative waveforms, leftward directional vectors balance out rightward directional vectors. Upward ones counterbalance downward ones. (of course, left and right, and up and down are terms of reference that do not exist outside Spacetime. Ultimately, the sum total energy of the Universe remains unchanged.

Consideration of As Above, So Below, enables mental imagery that facilitates an abstract understanding of what occurs beyond our human ability to perceive and understand. We understand that some things can be known and other not... Knowing is a mental manifestation of mathematical certainty. It is a form of Absolute Truth. It is one of those words that has different definition and meaning dependent on whether it refers to dimensional or non dimensional existence.

The Monad/Soul manifests mind as a direct consequence of information interacting with information. Intelligence is the product of that interaction. Memory becomes another product of Mind.. the Monadic Soul Mind has full existence and can control physical bodies, cellular structures that it has engineered and built over time... the cell bodies have an awareness of their external environment. That awareness increases with cellular complexity with corresponding complexity of the Monadic Soul Mind.

The evolution of Awareness will eventually become the evolution of Consciousness.

So, below/within the outer strata of Conscious Self and Conscious Mind belies SpiritSelf and SpiritMind and the sub conscious mind with its increasing complexity paralleling the complexity of the Spiritmind of the organism. Sub Conscious Mind interplays the considerations of conscious self and its intentions. It results from the various regions of the brain and the corresponding regions of the Mind attempting to act out their programmed behaviours in competition with each other... It is specifically complex within the human species because of the role of the pre frontal cortex and its affect on decision making processes. Early established behaviour programmes in an individual's life are deeper and harder to recognize by the Conscious Self of the adult which has its own agendas going on. Conscious Self, if not educated to be self aware of its limitations only listens to itself...it believes it is an intelligent entity with 'a mind of its own'.... Rather delusional.... Conscious Self is a totally mental construct. It is a combination of the Monadic Soul Mind interacting with Spirit Mind. Spirit Mind is also a construct, however it is resultant from the evolutionary processes of mind combining genetics and environment to produce more sophisticated bioquantum computers [physical organisms]. Intention is a manifestation of mind and it was designed to produce outcomes more beneficial to the survival of the organism. Intention existed way before humans, it served the SoulMind well in enabling survival through incorporating memory with intelligence and the ability of Mind to produce new ideas which are intended to benefit the individual. Sometimes the mind makes mistakes, it is how learning develops. Incorporating past experience with present environmental conditions. Intention is to preserve the genetic complement of the individual and its species. Mind learnt to encapsulate information within its strata representing the present

physical life form existence. The experience of the organism, from moment to moment, had a relative relevance to its survival, the Mind learnt to recognise this. We are talking of an immense passage of time passing for the Mind to develop this facility and to permanently store relevant information to aid its future existence. Encapsulating information and storing it creates a database that we refer to as memory. Mind has learnt to access it, originally in single cell organisms and subsequently in multicellular ones. Each cell of an individual organism has its own memory store. It must have, what sufficient reason would there be for it not to? ErMaybe if it was a blood cell with no DNA ?

The survival strategies that were the most successful were almost all laid down in the times when there were only single cell organisms... If they existed for more than a billion years before multicellular organisms, that would probably be time enough to develop and manifest the most successful strategies. Computer generated Game Theory demonstrates that the most successful strategy for survival of an individual and its genes is the 'Tit for Tat' model. Bacteria demonstrate this behaviour, why? because they were engineered by Mind with its inherent intelligence which will always calculate the most 'successful' outcomes as determined by Intention.

Below/within the strata of Conscious Self is Spirit Mind with some concept of Self attached to it. Humans have a highly developed form of conscious self, I consider that other organisms have a lesser form, if they have developed one at all. In humans, there is a Subconscious, this inter plays between Conscious Self and Spirit Self.

Spirit Self is the strata of Mind containing the memories, since conception, of the individual organism. By conception, I refer to the combination of male and female genetic information, the male and female genetic complement combining to produce a potentially more sophisticated version of its parents. Animals and plants will have a Spirit Mind with its associated individual self/memory. The

minds of all members of a species also have some form of connection with each other in this non dimensional realm of existence. What sufficient reason is there to assume that when the physical body breaks down, its corresponding mental body dissipates at the same time? The non dimensional existence may well continue to maintain its form...that mental form of existence will probably not be able to generate new innovative ideas etc, however, its existence is not necessarily extinguished with the loss of connection to its physical body. It is the loss of connection that, until death, exchanges energy/information between the two realms, and it is this last flow of energy/information that returns to the non dimensional that maybe corresponds to the 7 grams weight loss that human physical bodies demonstrate upon "passing over". The MonadicSoulMind has disconnected from the body, no information /energy returns to the corpse. 7 grams... Of the 100 or more trillion cells of the body, if only 70 trillion of them are active the moment before 'one's last breath', then that is 70 trillion cells all containing billions of molecules of DNA exchanging information/energy between the two realms.. That is ten trillion cells producing a gram weight of energy between them. That is one cell producing one tenth of a trillionth of a gram of waveform frequencies.. and then calculate how many molecules of DNA in one cell... there are more than one billion... if there were only one billion then that would account for each DNA molecule transferring one billionth of a tenth of a trillionth of a gram of information/energy in one direction because 'death' has occurred and the two way flow of information has ceased... How heavy is a waveform frequency? Well at the Big Bang sufficient forces condensed significant numbers of them to become the solid particles with mass that we refer to as electrons, protons and neutrons... I digress, and the maths is getting beyond me... Likelihood is that the more sophisticated the SpiritMind, the more likely it is to maintain its existence, particularly if this is beneficial

to the underlying SoulMind and its purpose, facilitating the Soul to return to its former finest state of being. Total symmetry, Godhead... The individual Soul will become a God. Of course it is just a word attempting to define something using terminology of today. The Mind of God will manifest when all individual Souls achieve Godhead. It is the Becoming. God does not manifest until all Souls achieve total enlightenment. That might be considered blasphemy, however, that is an old and outdated term, now erased by the pursuit of knowledge, understanding and by Mind itself... The more journeyed SoulMind can understand this, the less journeyed ones cannot. It is how understanding manifests as a product of Mind. Mind learns with each physical body incarnation, whether it is a bacteria, amoeba, plant, tree, fish, dog, elephant or human... The journey continues until the intended endpoint. At which point reincarnation cannot occur. Until then, correct and continue... Conscious Self is the combination of conscious mind assembling information from physical self, the environment and the genetic components affecting the assimilation of that information into the memory within SpiritMind. The conscious mind only experiences the 'Now'. Spirit mind is a bit more canny, but most of its attributes are layered and connected with SoulMind 'below'. Conscious Self develops a personality. Spirit Self manifest the Character. When personality and character become unbalance, so too does the mind of the individual. It is easy to understand, no? For some yes, for others, not so easy... for others not yet possible... They need to learn more to be able to understand more... What is their problem? Being born into an environment that has not enabled or facilitated a natural development of their mind to develop. Being presented with discordant information that confuses or restricts their innate ability to learn. Bad diet, malnutrition, misinformation, an unsupportive environment during pregnancy, infancy and so on...being at the effect of others who have an agenda that suppresses the individual's potential.

The intention of all parents of relatively functional minds (most people) is to care for and protect the wellbeing of their children. They are dependent on their environment and their past experiences... There is no blame...THERE IS NO BLAME. THERE SHOULD BE NO POINTING THE FINGER... We are all at the effect of the past... our present incarnations past experiences and also the memories of our experiences from past lives. What sufficient reason is there to suppose that these past life memories do not impinge on our present life.... That is what some folk refer to as Karma... In the bigger picture of 'what goes around comes around', karma could be regarded as a mechanism entrenched in non dimensional information interplay, we are so much at the effect of past experience going back hundreds and probably thousands of years...

The SpiritMind has its associated aspect of Self due to it being entirely a non dimensional construct corresponding to the physical body and the concept of Self associated with it. It is a separate entity that has manifested as a result of the SoulMind connection with either a fertilised egg or a seed in the earliest phase of germination. There is a mechanism for a seed attracting a SoulMind to it in order to provide the Life Energy and information required for cell division and cell growth. Maybe it is not so different a mechanism for a fertilised egg. We enter the realm of conjecture, I have not applied my mind to this matter, only to the fertilisation of egg by sperm. Likelihood is that as the SoulMind learns from its past experiences and life forms it has engineered, it develops a more sophisticated mode of connection. For humans, either the fertilised egg (with its non dimensional corresponding form) attracts the Soulmind to it or, the ripe Ovum attracts a SoulMind to it before conception and it is the SoulMind that chooses which DNA complement best suits its intention and allows only that single sperm to enter the egg for fertilisation to occur. Either way, it is the SoulMind that delivers the energy and information through the DNA to regulate the

development of the embryo. A whole range of evolutionary precursor forms manifest and are reabsorbed during embryological development. Gills and other non human features temporarily appear as the embryo acts out its preprogrammed development until the human form is reached. That is around 12 weeks after conception. Huge changes occur during this embryological growth, the changes are linear, in line with evolutionary development of form and species. At 12 weeks baby human is formed and it is then called a foetus. From that point in time, SpiritMind can start to manifest...prior to that, it cannot, the embryological development is regulated by SoulMind.

Physical bodies are separate and individuated, we cannot know the thoughts or memories of another person in the physical realm. Mentally we are all connected, not at the level of SpiritMind, that has too much Self associated with it. Deeper within the strata, Self is relatively non existent, and SoulMind is to the 'forefront'. The closer to the Soul, the further from Self, and it is likely that certain aspects of our evolution connect different parts of our body to different strata of the structure and form of Mind.

It is likely and feasible that the earliest organs evolving within animal bodies have a closer connection to the more inner workings of the Mind. Gut feelings would be the most primitive. The gut is the first organ to appear in embryological development. You might have read that it was the anus that appeared first, however, the largest organ of the body is the skin, it is on the outside and the inside. Inside, it manifests as the digestive system in humans. In the earliest multicellular organisms it would have been the tube that water and other particles passed through...(the movement of the water and particles is explained by new evidence regarding the fourth phase of water, H₂O₃, check out the Ted talk by Professor Gerald Pollock, or more of his lectures on the subject of EZ water). It is easy to understand the importance of this primitive gut tube being able to differentiate between potential food and potential

poison...learning to do this would be on prime significance to mind and the need to remember and improve on the system is paramount to future survival in what is already a highly competitive and potentially dangerous environment of various multicellular life forms vying for the upper hand and also defending off bacteria and viruses...so... The cells of the gut have a closer connection to the realm of Soulmind than the cells of the kidney. In evolutionary terms, the kidney is a much more recent 'invention'. Subsequent to the gut and skin cells of the developing blastocyst (the bundle of cells that result from cell division of the egg fertilised by the sperm), the next organ to appear in embryological development is the heart. The need to pump water with is associated minerals and foodstuff around the multicellular organism became obviously necessary because the natural movement of the H₂O₃ water would be slowed down by frictional forces as the organism increased in size. A pump is the rational choice of machine to create, Intelligent Mind designed and built a pump. Subsequently it engineered and kept improving on the original blueprints. Easy to see the very close connection between heart and Mind, easy to confuse the two with insufficient clarity. Consider the much later introduction of the mammalian brain and the limbic system, enhancing the accuracy of the more primitive decision making processes already established. The Mind of the reptilian brain (without a limbic system), processes information on a more basic level of responses. Friend or foe, food or not, attack, run or do nothing. Add a limbic system to this processing of information and emotional input can benefit the organism. Increasing efficiency, saving energy and considerably increasing the computational potential of the mind. It introduced degrees of consideration prior to decisions being made in the mind and responses being initiated in the body. How friendly? How dangerous? How tasty? Association and correlation of experiences with memories on a scale of, for example, 1 to 100. Concepts such as friend or foe, run or attack, good or bad became more complex.

No longer a black or white world of experience but one enriched by colour (metaphorically speaking, although analogous to the evolution of colour perception in the mind). The limbic system introduced a fine tuning of decisionmaking processes... Relativity had taken off. How tasty? And if I bury the carcass does it become more tasty? Memory and experience interact to lay down new memories. It is inefficient to have to remember everything and so many past memories can be allowed to or actively breakdown. This is a mental process established probably within the past billion years. Experience in a particular context and environment may not be the same if some significant variable changes. All of this data is recorded and processed by the Mind. Mental pathways and patterns are redesigned and programmes altered to incorporate new information that might increase survival. Consider that a fundamental aspect of mind... It is not in the brain....this process, originally a simple dialectical response, was occurring before neurons even appeared on the planet although multicellular organisms were in existence. Thesis, antithesis, synthesis. Producing a mental response that produces a new consideration to be tried out in the physical body. The single cell is a bio quantum computer. Single cells are machines designed by SoulMinds. After all, there was not just one SoulMind out there, (or should that read in there? whichever way, there is an infinite number of them). The bio quantum computer is a physical structure of molecular building blocks, its operator is non local, Mind is non local. Professor Russel Targ from Stanford University clearly states this. He had CIA funding for 23 years researching Remote Viewing and ESP..... One has to consider why spend so much time and money on a false claim.....very accurate data came from this field of study.

Apparently...

Trillions of cells in the human body act in concert with each other in real time. Do the maths. How much data is being processed in a millisecond. Neurons in the spinal chord firing 2000 impulses per

second... If information is not processed outside Spacetime what other mechanism is rationally presented to explain this phenomena? Oh yes, Godbut apart from him, and using the terminology of today he may be female.

AAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAA

So we have the mental construct that is conscious mind/self that we think is located in the head experiencing the now with some connection to the non local spirit mind/self which is also connected to the SoulMind that manifests our existence. SoulMind has memory, it is not the same memory as SpiritMind but it connects to it. Hence the explanation for past life regressions....

Memory of a past life is unique and proven at times to be most accurate. Memory of the place between past lives is the same for all people.

Paul Pearsall in the book 'The Heart's Code' provides plenty of anecdotal evidence from individuals who successfully received heart transplants and developed characteristics displayed by the donor when they were alive. Why the connection between donor and recipient? Simple, the DNA of the heart connects with the SpiritMind of its original owner. Characteristics of the latter can manifest in the former. It is not just transplanted hearts that produce this effect. Other organ transplants can do so, of course the data is ignored by mainstream science because it does not conform to the conventional mindset of modern day scientific materialism...how long will it take for this baby to go down the plug hole...?

And now consider the potential existence of aspects of mind manifesting within individual organs. How many cells constitute a kidney? If originally, single cell organisms were connected to a Mind through their DNA and they had a basic awareness and will to live, then why is it not feasible for many cells, all manifesting the same same organ, eg a kidney, to have a basic awareness of their

‘raison d’etre’ and consequently form kind of submind with its own will and intent.

A collection of cells with a will of their own, kidney cells want to be kidney cells... Heart cells want to be heart cells, germ cells want to be anything they can. Sounds farfetched but to me, that the earth has only been around for 5,000 years or so is far more ridiculous a consideration.

At the centre of Mind is the Monadic Soul, it generates intelligence which manifests Mind by definition. The purpose is to enable the Monadic Soul to return to full symmetry, a mathematical state that changed with the occurrence of the Big Bang. SoulMind, with inherent intelligence is there for the MonadicSoul. Dimensional physical existence has created organic molecules in the environment on planet earth several billion years ago which was quite formidable. Complex molecular structures with hexagonal shape which can send information from a source external to the realm of Monadic Souls appeared on the planet surface. These molecules with a hexagonal carbon skeleton produce micro vortices which send information from the dimensional realm through the zero-point field to the mental realm where SoulMinds exist. A two way flow of information through the zero point field ensues and SoulMind wants to make the process more efficient and consistent. Through calculated trial and error, the manipulation of the physical realm of these molecules ensued. Eventually the master molecule was engineered. DNA had arrived and the rest is history.

Understanding Life...Introduction Part 2

What is life?

In order to consider this it is really necessary to define the word and that in itself creates conflict between individuals.

... It is understanding that Mind strives for, and in order to understand correctly, us humans need to have accurate definitions of words and terms in order to reduce misunderstanding and avoid conflict.

Recognising that there are two realms of existence that we experience simultaneously enables us to realise that we have words that have a different meaning when related to each individual realm. We also have some words that are specific to one realm only.

Because there are two realms, a lot of confusion arises between individuals and groups because they are not aware of this Truth and consequently misunderstanding can quickly develop and escalate into conflict. Some definitions are fixed and finite, others can be more general, allowing for understanding to assign meaning to the term or concept.

Reality can be defined as the co-existence of two realms, a non dimensional realm and a dimensional realm. The dimensional realm is ultimately an extension of the non dimensional waveform frequency realm. It is this extension that enables the dimensional realm to be measured and quantified. The condensed energy that constitutes the physical particles, ie electrons, protons and neutrons, generate energy fields such as gravity and electromagnetic forces that enable the dimensional realm to maintain a relatively constant state of cohesion and existence. The laws of physics are deduced from this physical reality, and these almost infinitely small particles (electrons, protons and neutrons) are the solid building blocks of the physical dimensional realm.

Within themselves, protons, neutrons and electrons are complex packets of condensed energy/information, they are sufficiently

dense to have mass and their weight can be measured/calculated. They interact with each other in an organised manner and arrange themselves as a variety of organised forms and separate units to become what science defines as elements. Chemistry is the science of how these elements interact. The periodic table lists them, the most basic element is hydrogen. One electron, one proton and one neutron. Next is Helium. Two electrons, two protons and two neutrons and so on up the periodic table. Carbon has six of each 'trons' nitrogen has seven, oxygen has eight. Chemistry denotes an abbreviated lettering code, H for hydrogen, C for carbon, N for nitrogen Fe for iron etc

The lettering code/definition of elements within the periodic table enables scientists to 'read' this abbreviated terminology and understand the concepts described in these chemical formulae. The basic unit of each element is an atom. Two or more atoms combined together are defined as a molecule. Elements can exist in nature in either their pure state, a huge stable collection of atoms linked together with other identical atoms to form stable solid structures. Some elements exist [at normal temperatures and pressure] as gases, here two or more atoms of the same element combine to form a molecule, ie more than one atom...

Pure iron only has iron atoms bound together by physical forces. The same is true for all elements. Pure oxygen only consists of oxygen atoms which form stable pairs of atoms sharing their electrons. This relatively stable molecule is denoted in chemistry as O₂, two oxygen atoms held together by physical forces. The interaction of atoms and molecules, and their accompanying force fields constitute and form the physical dimensional realm of existence and manifest the reality of SpaceTime. The laws of physics and the subsequent laws of nature are within this order and at the effect of the dimensional spacetime realm.

Life forms as we perceive them, have evolved sensory apparatus to pick up and receive information from the dimensional realm. Ears

receive three dimensional sound waves, the nose collects three dimensional molecules in the air and we have the concept of smell, taste buds in the mouth collect information from the molecules that constitute food, or anything else that gets put in the mouth. Different organisms have evolved different receptors to collect information from the physical world. Organisms have also evolved sensors to collect non physical energy. Birds can respond to electro magnetic waves and eyes respond to photons, the basic units of light, photons have no mass and are consequently, by definition are non dimensional.

The mind is outside of spacetime. The mind collects information via DNA from the various receptors within the cell body that it has engineered over the Billenia. It is Mind that has designed the systems that enable cell bodies to maintain their integrity and existence. Maybe around three billion years ago the first most simple single cells came into existence.

Bilennias ago, Monadic Souls received vortexed information via organic molecules with hexagonal shaped carbon rings and Nucleic acids in the chemical soup, (the mineral and molecular rich bodies of water on the planet's surface). The concept of Mind as we attempt to understand it, manifested. Slowly through the process of the dialectic, minds produced self sustaining and self replicating single cell bodies through a process of guided trial and error. This information feedback system was proposed by Lamark in opposition to classic Darwinian theory, life on Earth was progressing and the Monadic Soul Mind had engineered an instrument that could transmit information from the physical realm and subsequently receive information sent back to it by the Monadic Soul.

Communication between cells evolved and similar cell bodies could work together to enhance their chances for survival in the harsh environments on and below the surface of the planet.

Mind has already been evolving inherent intelligence non dimensionally for maybe ten billion years since the theoretical big bang concept, the event that marked the beginning of a new aeon of existence. Leibnitz, had a mind that understood that the life processes occurring within the single cell were ordered and organised by an even smaller order of organisation. He was of the Platonic, Pythagorean School of Rational Idealists. He officially defined the smallest possible unit of existence as the Monad, (from the Greek language). Unofficially he equated it with the Soul. Had he announced this officially he would have been branded a heretic and put to death by the Catholic Church.

Defining a system facilitates communal understanding, I am developing a definition of terms to facilitate this understanding...actually, I consider that it is more a matter of explaining words that we already have. An accurate definition should resonate concordantly within one's mind.....a feeling of understanding should arise. And so I try to develop explanations that outline the differences between Soul, Spirit, Mind and Will. They all exist non dimensionally but they experience the dimensional realm and interact with it according to their level of connection with it.

The Monadic Soul is the receptacle of Mind.

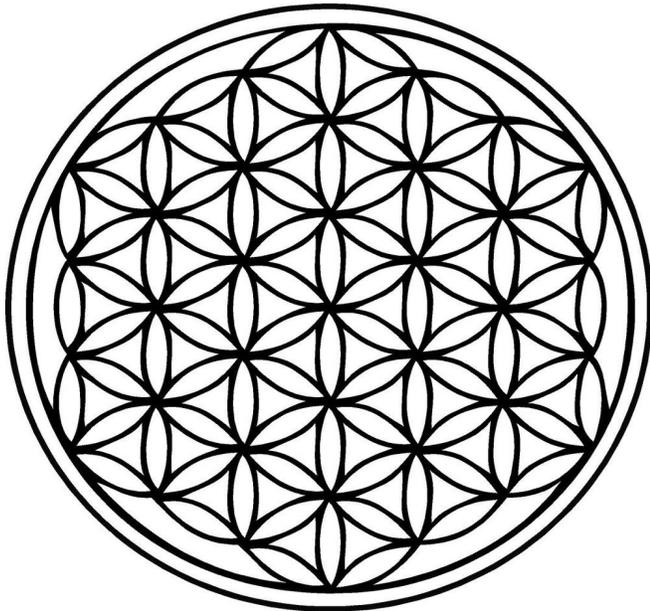

Mind is the order of the inherent process of information interacting with information at the most basic and fundamental level of non dimensional existence.

The order inherent in this interaction of information is the basic nature of intelligence. Processing information is the inherent interaction of information interacting with information. Mind processes information. That is what Mind is. The process of information interacting with information is the process of information processing. Processing information is basic intelligence. Intelligence is the ability of the mind to process information . Mind, manifesting within the Monadic Soul, will learn to recognise that

information within itself differentiates it from the Monadic Soul Minds that surround it. However, they are interconnected, leading to the eventual conceptual existence of collective Awareness and (subsequent) Consciousness. Physical bodies, on the other hand, are individuated, cell bodies exist as individual and separate entities existing in SpaceTime.

The Flower of Life

The sum total mental singularity realm can be represented by the flower of life

The centre of each flower represents an individual Monadic Soul singularity, the petals represent all the frequencies/energy, both positive and negative, that emanate from it (all balancing out to zero). They emanate and interface with the same frequencies of the surrounding monads. The word 'direction' is a dimensional term and thus cannot be used to describe how the frequencies emanate. Mathematically, they are vectors. The totality of these emanations

fill the plenum of the non dimensional realm, there are no 'gaps' between each flower.

Each Monadic Soul singularity is a part of a super singularity which itself manifests the dimensional realm with the occurrence of the Big Bang and connection with the dimensional realm for each Monadic soul singularity is through the concept of the zero point field. The zero point field is a theoretical dimensional concept, and it is an accepted term used in conventional science. It is also by definition a non dimensional concept as it refers to a zero point, ie having zero existence. Conventionally, the non dimensional realm does not exist so how can the zero point field exist.... Maybe because the convention has got something wrong... You can consider that within the 'as above so below' concept, that there is a monadic soul on the 'other side' of the zero point... Dimensionality manifests from the zero point, non dimensionality is the Monadic collective..

Memory

Subsequently, with information being able to be 'stored', (non dimensionally) the concept of memory developed. The ability of the mind to retrieve information stored and incorporate that information into the decision making ability that inherently developed in Mind would have been an evolutionary enhancing development. Memory is a phenomenal tool for survival.

The dialectic is a simple process. Thesis, antithesis and synthesis... At the most basic level of frequency interactionfrequency 1 interacts with frequency 2 to form frequency 3 . However a simple frequency is already a complex packet of information and in truth, if both frequencies have information with a, let's say, positive charge/annotation, they may not interact. So the basic level of information interaction is that frequency (a) interacts with frequency (b) to form frequency (c), or alternatively, it does not interact. The most fundamental basis of information exchange is already a two sided process. Either it will interact or it will not... Will, or Will

Not... The concept of the potential for 'choice' is there at the most basic level of information processing. Thesis is a concept, as is antithesis... Frequency 1 and frequency 2 representing the most simple wave form information bundles, interact to produce the synthesis of the interaction. The dialectic at its simplest. As Mind evolved and interacts with the dimensional, this comparing one thing with another to result in a 'decision', it will become basis for the natural process of discrimination. Discrimination is natural, until human minds reach a level of rational control, nowadays discrimination is generally be interpreted to be a bad thing. Recognising discrimination to be a natural process should enable one to understand it for what it is, ie. part of the evolution of Mind. Understanding something enables us to have more control over it.

Originally enabling the evolution and development of single cell organisms, the mechanisms of survival in the physical realm developed, Mind wanted to learn more and more about the physical realm, more complex single cells evolved accordingly. Long chains of DNA facilitated greater information exchange between the dimensional and non dimensional realms, life forms competed for resources and with each other. More complex cells evolved, however free floating DNA chains with their supportive protein scaffold limited the size that a single cell (prokaryotic) could efficiently maintain.

Mind overcame this problem by encapsulating the DNA and locating it in the centre of the cell. (Eukaryotic) This was a significant game changer in the evolutionary process. The long chains became coiled up and central to the cell body enabling a large increase in size of the single cell. Subsequently, and with the development of multicellular organisms with differentiated cell functions, far greater amounts of information were able to be exchanged between the two realms. The information enters the DNA in the spacetime physical realm and is transmitted/ vortexed

Commented [H1]:

into the mental realm outside spacetime. The information is processed outside of spacetime, stored information (memory) is recruited and 'considered' a decision is made and it is then sent back to the cell body via the two way information exchange mechanism that is inherent within the nature of the vortex inside each DNA molecule.

A billion years of this process increasing in efficiency, enabled the mind to make very quick decisions with physical responses in the cell body that it was interacting with. An intimate interrelationship developed between the mind and the cell body....the mind needed the cell body in order to receive information from the physical realm. When the physical structure of the cell body was damaged the chances were that the integrity of the cell was lost and that "death" occurred. Slight damage to the cell body may have enabled the cell to still function and repair mechanisms would have evolved accordingly. Not by pure chance, but by information feedback systems between the cell and the mind controlling it...

Try to contemplate a billion years of Mind processing information within itself, a totally non dimensional experience, intelligence evolving within the Monadic Soul. Of course, mind is outside spacetime, it is a singularity, beyond human understanding, we can only rationalise and abstractly attempt to conceptualise its existence and form, because it is the nature and source of our physical existence as a living organism.

The non dimensional realm of existence is purely a waveform frequency/information realm, it is outside spacetime, it is the realm of Mind, Soul, Spirit, Will and Memory.

Life, being the process of information exchange between the dimensional and non dimensional realm, enabled living organisms

to develop in response to information received from the physical environment and consequently mind evolved accordingly. By definition, species don't evolve. Evolution is a slow gradual change, species cannot interbreed, there is a big difference between them. Minds on the other hand do evolve and they develop understanding, they can design, engineer and generate life forms accordingly, usually through subtle changes within the species and occasionally by the introduction of a new species. Organisms of the same species share a lot of information because they have inherent understanding of life from the perspective of that particular species. Members of the same species share and communicate much more information and can understand each other far more than separate species. Inter species communication does occur in nature and some species can work with others in certain situations that benefit a mutual increase in survival. Members of the same species that work together ultimately increase the probability of their genes surviving and consequently become more successful.... that is until some external physical or environmental factors limit and affect this growth and development. Survival is based on mutual aid and communal support, not survival of the fittest as Darwin allegedly suggested. (P. Kropotkin 1902 Mutual Aid, A Factor in Evolution)

MINDISM And Cartesian Duality

Mindism is the concept that develops from the precept that there appears to be two realms of existence, dimensional reality and Non Dimensional reality and that ultimately, the dimensional realm is a physical manifestation originating from and composed of non dimensional activity.

Mindism is Platonic, Pythagorean philosophy enhanced by more recent mathematical statements, combined with scientific theories to produce a rational and reasonable single model explanation of everything .

It explains reality as we perceive it and as we rationalise, understand and experience it.

Mind is a mental phenomena, originating from the Soul/Monad, and it is the Monadic collective that is the cause and origin of the physical, dimensional realm that we experience as life, matter and the universe..

Mind is outside SpaceTime and hence is non dimensional by definition.

Dimensional existence is empirical and can be measured. Human minds introduced and evolved Science which developed agreed conventions of measurement, such as centimetres, litres and grams, enabling us to engineer and build the world we live in today.

Scientific convention today is still fundamentally Newtonian. It denies the existence of a non dimensional realm of non physical activity, and at the same time is totally dependent on mathematics to 'prove' its theories. Mathematics is a totally non dimensional subject. It is the language of the cosmic universe and has no physical structure whatsoever... Mathematics is a totally mental phenomena occurring within Mind and describes/defines the activity of Leibnitz's Monads, the First Causes of Existence (as will be discussed later in this work).

All activity within Mind is non dimensional waveform frequency information interaction and exchange. In this work, the term 'Mind' refers to activity within the mental realm which itself contains a finite infinite number of Leibnitzian Monadic Souls from which all the energy in the cosmic universe manifests.

The term cosmic universe, the totality of Existence, refers to the dualistic concept of dimensional and non dimensional existence. In simple terms Mind and Matter. The cosmos is dimensional and the universe is really a combination of dimensional and non dimensional.

Definition is important when communicating with other human minds. If we do not have an accepted convention of definition then confusion and misunderstanding arises with its subsequent detrimental activity. Unfortunately today, too many people have so limited a vocabulary that misunderstanding and conflict has become the norm....this situation should easily be remedied by delivering accurate information in the form of well defined vocabulary to the individual mind.....however, as we know, it is not that straightforward.. Mind has evolved human beings and they are at the effect of the evolution of mental activity.

Mind is on a journey from unconscious to conscious, from dark to light, from ignorance to divinity, from alpha to omega.....the journey is a mathematical self solving equation intended to return Mind to its all knowing harmonious symmetrical state of oneness whereby all the individual minds within the collective Mind have reached their ultimate state of existence. When enlightenment is attained on an individual level the SoulMind will no longer reincarnate. It will affect those SoulMinds around it which in turn influence others, leading to the total enlightenment of all minds. This is then the only true definition for the concept that we know as 'God'. Individual minds, having achieved full symmetry and enlightenment have no need for reincarnation. Instead their

existence is totally non dimensional, and one could say that that individual mind has achieved Godhead. It has become a God... Monadic Soul Minds (MSMs) constantly share energy/information with the MSMs around them, their existence affects other Monadic Souls around them ...as above so below. The Monadic Soul engineered living cell bodies around 2 and a half billion years ago [maybe 3 billion]...when physical bodies interact with each other there is a non physical interaction occurring at the same time, however, the non physical interaction is outside SpaceTime. The concept of "outside SpaceTime" although it exists in our minds is virtually impossible to comprehend because our understanding of reality has been so programmed by the information presented to us as we have grown up.

Had we received a more open broad based education, we might have a better understanding of Mind and its non dimensional reality of existence. We can but speculate. One thing is for sure, the only way to consider the concept of "outside SpaceTime " is to use our mind. We use our mind to process thoughts, ideas, definitions and concepts, it enables us to understand the world we live in. It enables us to understand and make sense of the vast amount of data that is sent to the mind from our senses.

In real time, one eye sends a billion messages to the brain every second... Our senses send information to the brain via neurons and it is relayed to the mind accordingly. Specialised receptors at one end of the neuron collect information from the environment around our body and relay that information to the mind, predominantly via the brain. However, more primitive simple organisms that do not have nerve cells also send information to the SoulMind controlling that organism....DNA is the 'transmitter/receiver, DNA enables efficient and controllable information exchange across the zero point field. It enables Life, as we define it, to manifest on planet earth.

Combining logic and reason creates a rational state of mental activity. This happens by comparison... Comparing one idea with another is mental activity, this occurs within our mind and they are considered and evaluated, decisions are made accordingly.

Mathematically speaking, an idea is a super complex waveform frequency algorithm, the idea is a combination of thoughts, which are themselves less complex waveform frequency algorithms.

Waveform frequency algorithms interact according to previously established wave from frequency algorithmic activity. This activity is directed and controlled by the mind which has been evolving since its original form was created out of the relatively simple mental interaction of algorithmic information.

In the most primordial cell bodies and the most complex multicellular organisms, actions are carried out, responses are noted... Everything is recorded in memory and used for future information processing. Some of this mental activity we actually experience in real time. I refer to this realtime experience of information as Conscious Self.

Conscious Self is aware of what is happening in the moment of 'now'... It is where the attention is focussed and enables us to make realtime decisions that affect and determine the future.

Conscious Self is a mental construct. It is necessary for the survival of the individual, it uses the mental faculties to try to ensure its survival. Conscious Self is a tool of the Unconscious Mind, it generates a sense and concept of Self...

Earliest life forms would have had relatively simple minds controlling them. They were relatively simple life forms. However, do not be misled... A simple life form is itself a highly complex organism controlled by a highly intelligent mind. This is not what I was taught at school. But then again most of what I was taught had to be revalued, revised, updated, changed, refined, thrown away etc etc. Most scientific theories presented throughout the past century or so have been shown to be wrong as more accurate information is

realised. To accept scientific theories as Truth is not a good idea... You will develop ideas that are built on scientific sand...not the solid foundation one would chose to build a house for Self... For a solid foundation of Absolute Truths, mathematics is the groundwork and strength to build on.

Intelligence is within Mind. Understanding is within Mind. Mind manifests from the interaction of a Monadic Soul with a physical cell body.

Growing up in the world today is learning how to, and when and when not to, conform to convention. Cultural norms and conventions, national norms and conventions international norms and conventions are out there to be experienced and either challenged or accepted accordingly to context and environment. The conflict between being one's Self and being oneself is constant. That is until one realises the difference and cause of the difference. Learning/indoctrination about who we are, and what we are, and how we learn this is and process and understand that information, makes us the person that we are today. Accurately delivered information, misinformation, disinformation and wrong information have to be recognised for what they are....and that can take a lifetime.....

Name rank and number against free mind and spirit. Personality against character, Conscious Self against SoulMind, with SpiritSelf and the SubConscious somewhere between the two, (depending on circumstance and subject matter).

The Key To Understanding Life. Introduction part 1

Life is the flow of energy and information from the dimensional realm of Matter to the non dimensional realm of Mind and back to the realm of Matter and vice versa.

The conventional definition of life produces a couple of anomalies such that viruses conform to some but not all criteria. Ultimately the definition comes from a Newtonian mindset, which is ironic really because he is held responsible for taking Mind out of the mind/matter equation...creating the paradigm that mind emanates from matter

Rational idealists reject this mindset and replace it with the Platonic/Leibnitz understanding that Mind is the essence of existence if not "existence in itself..."

It is necessary to recognise or at least consider that we exist in two realm at once. The physical realm of Matter and the frequency realm of Mind.

The key to life on this planet appears in the form of DNA. It would be more appropriate to call DNA the keyhole to life. The key is the mechanism within the molecule. You cannot see DNA but you accept its existence, you cannot see the keywill you accept its existence? Hopefully you will at least consider the matter. (pun intended)

It does seem such that where we humans experience life forms, we find that they all have one thing in common...DNA.. a double helix of 4 types of very similar molecules.

So what are these same molecules? In chemistry they are called Bases. There are 4 DNA molecules, Adenine, Thymine, Guanine and Cytosine. These bases pair with each other, Adenine with Thymine and Guanine and Cytosine. Their initials, A, T, C and G, in the sequence they follow on the chromosome make up the Genetic Code.

Energy flows between the two realms in the form of frequency waves.... Only frequencies small enough to pass through the Zero Point Field can do this. The Zero Point Field (ZPF) is accepted by conventional science as an existent. They say it's a three dimensional field that fills the universe and it was from this Field that dimensional existence manifested in the form of The Big Bang. You can see Professor Brian Cox demonstrate this on the TV programme Qi. Convention states there is nothing smaller than the zero point. I ask you to contemplate the existence of another realm "on the other side of" the ZPF. Rationally it is easier to consider and conceptualise its existence on the other side that if it is occupying the same location as solid dimensional matter.

Ultimately, as we can only, at this stage of evolution, rationalise its existence from the information available to us, it could be conceptualised or considered to exist "somewhere else", in terms of quantum physics, it is non local. This work certainly does not have all the answers, at this point in time, I am not that intuitive...

Some molecules which have dimensional structure can facilitate this flow and certain organic molecules, I consider, enable this, increasing the rate of flow and allow for some form of location positioning to be established.

The concept of a non dimensional realm outside spacetime had been repeatedly rejected prior to the establishment of quantum physics...

Now it is a given in the quantum realm but creates a lot of difficulties to conventional science. (Newtonianism)

Try to consider an existence outside spacetime.... It is mind boggling and challenging.

Consider this reality.... Each human eye sends one billion messages to the brain every second as a continuous flow of changing information, and another billion messages reach the brain from the body, so that three billion messages are sent to the brain every one second.... If a soft ball is thrown towards you, its position is

constantly changing. Somehow the mind can process this constant flow of information and learn to coordinate moving the position of the hand so that it can catch the ball. Every nanosecond the information is changing. Now consider that this act occurs in a slight wind.... Even greater variables apply but the mind attempts and, if it is not so windy, the hand will catch the ball. Think about that. Billions of bytes of information processed allegedly in real time enable this amazing act to be performed, and once we have learnt how to do this it stays with us for life, like riding a bicycle. It should be irrational to accept this explanation without a precise mechanism in place that can explain how this happens... Like so many things, conventional science just creates a new word or a complex concept, itself difficult to understand in order to cover up for the gap in knowledge that should produce a reasonable explanation.

A classic example of this is Gravity. Apparently Newton invented it. (I joke) he discovered it, is how we are taught.... Think about it.... Everyone knows that apples fall to the ground, he just did some measurements on speed and distance and realised that the realm of time was measurable. Well, we knew that space had been measured using conventionally accepted units for thousands of years... It was easy to connect the centimetre to a gram weight by using water as the common medium producing a convention for weighing things, one cubic centimetre of water is one gram. Water is almost everywhere on the planet and so, with a centimetre rule a convention of weight emerges...

Speed and velocity required a relatively accurate measurement of time.... Newton was fortunate that the clock measuring minutes and seconds was available for his calculations. Where would be now if Pythagoras had a clock?

Newton believed that space and time were totally separate entities and his system of measurements were incredibly accurate for a couple of centuries but then the quantum world was established. All

forms of measurement require maths. Science is all about experiment and verification. Verification is not proof. Proof is truly a mathematical concept. There is only one true, correct and right answer to mathematical statements. Whether it is $1+1=2$, $100 \times 22.5 = 2250$, or $\pi \cdot r^2 = \text{the area of a circle}$, there is only one True answer. However, it needs to be considered that there are degrees of wrongness. If the given answer to 100×22.5 was 2255 it is less wrong than 2280.... Relative wrongness should be better understood in our dimensional existence, there would be less confusion....we have become indoctrinated into thinking that the world is black and white, right or wrong etc, but in truth it is mostly relative and this should be kept in mind at all times..(excuse my sense of humour .. There is nothing relative in the nondimensional realm of mind.)

All dimensional frequencies come under the definition of being either sine waves or cosine waves...the general term is sinusoidal waves. The universe is a structural form of sinusoidal waves. Leibnitz, in his Principal of Monads stated that the monad was the smallest possible thing to exist and it generates the full spectrum of frequencies in the non dimensional realm. Their 'production and release' produces an incessant and concordant flow of energy from each monad. The non dimensional realm is a plenum of monads. That means there are no gaps within the monodic collective.

How information flows. Introduction Part 3

Information flows as waveform frequencies. Energy flows as waveform frequencies. Information and energy are synonymous. A waveform frequency is a flowing 'point'. It is perpetual motion in action. Its path is consistent and determined by the information that is the 'point', the 'point' is to be considered as an unalterable behaviour program. Its path, the waveform, is finite, it is defined by the information inherent within the 'point'. It will continue to flow with the same waveform path/pattern until it interacts with another frequency. When it interacts with another frequency its motion continues but it may well combine in some way or another with the other waveform to produce a variety of subsequent waveforms depending on the information contained within the point

As above so below. This ancient adage is a tool that enables the rational aspect of Mind to use the mechanism of intuition to gain insight into the forces, forms and structure that manifest as information/energies interact.

Definition: Intuition is the intended the flow of information from the unconscious aspect of non dimensional mind into the mental construct of dimensional conscious self. Conscious Self recognises that the information that has "popped into the head" is a solution to some unresolved issue that the conscious mind had been working on. This unexpected solution to a problem arrives "out of the blue" When considering this intentionally directed flow of information, it is apparent that it is almost the same concept of information flow between various aspects of the individual mind that is constantly occurring. However, in this instance, the information is intended to be received by conscious self, we are aware of it entering our consciousness and realise its significance. We have never been taught to differentiate between thoughts/ideas that are the mental dialogue and narrative that conscious self generates as a constant

repertoire of information flow (the now, being 'in the moment'). The primary focus of our attention and awareness, usually a combination of one or more sensory inputs to the brain, or maybe daydreaming, and those thoughts and ideas originating from within deeper aspects of our Mind and they are projected into our consciousness for a reason.

Some of these mental 'projection' messages come from the subconscious and we consider them aspects of conscious self and part of who we are. Sometimes we defend them with gusto to justify who and why we do things, what we like and dislike...they are states of mind resulting from our past experience and behaviour programmes we have either instilled in ourself or had instilled in us. Within this definition of Intuition, arrival of the information is unexpected and interrupts the conscious flow of "now" information being processed. It is an 'Archimedes' moment of 'eureka' If ones attention is focussed on solving a problem, various aspects/areas of the Mind are recruited to focus and solve the problem. It is ordered and directed by Will.

Will is a non dimensional phenomenon of Mind. It directs and carries the information flow according to 'intention' and 'decisions' made within strata of the unconscious mind. It can manifest as physical action in the dimensional realm.

You can try to lift your arm using the Power of Will. Let your arm hang down and try and move it using the power of your Mind. It does not move. Consciously and dimensionally intending an action with the physical body proves fruitless. Your arm will move, as do any movements of the physical body, through the action of unconscious Will. Focus on this and you will begin to perceive and experience the subtle yet powerful process of Will.

Will is directly related to Free Will. The Mind will choose to perform actions according to its past experiences recorded as memory. It has established preferences, established through time and experience, recorded non dimensionally. The memory of

SpiritMind and SoulMind are not the same. SpiritMind stores memory of experience specific to the incarnation that generates SpiritMind. SoulMind is deeper and memories stored relate back to the beginning of life forms originating on the planet and even before that.

Mind learns to make more efficient choices.

We have all been so psychologically conditioned, indoctrinated, programmed and brainwashed with misinformation that it is not easy to remove these layers of dysfunction that cloud our perception and understanding of Self, who we are, what we are and why we do what we do.

Discussing Free Will is complex and not easy. It really requires a deep level of understanding of the processes occurring within the development and growth of an individual and the information/education that the individual experiences.

It also requires an acceptable definition of Freedom and being Free.... Cause and Effect and First Causes.....So not really appropriate for this particular Work.

Internalisation .

Often confused with rationale, it is the mental processing of sensory information, it occurs within conscious self and is very much at the effect of sub conscious established programmes and agendas, as opposed to rationalisation which is a deeper level of mental processing of information based on understanding and established a priori truths. Internalisation is the constant narrative that conscious mind experiences in the now...

Another very important distinguishing factor is that internalisation involves the individual's "worldview" which greatly influences how the information is interpreted and understood. The less understanding Mind is more at the effect of its worldview, which is itself less coherent (less in tune with) and more misunderstanding of the world it lives in. The more simple the mind the less it generally

understands. The subconscious mind likes to maintain the status quo of previously learnt behaviour programmes.

Vocabulary is a most important tool for understanding. The less the vocabulary the more limited the process of understanding will be. A larger vocabulary enables the mind to understand (and hence describe) more things in more detail.

Eg. The car works because it has an engine. This is a simple statement. You may know that the engine has pistons and they are involved with the production of movement. A detailed vocabulary of the engine and all its working parts is virtually necessary to fully understand how it works...and then you only know how the engine produces power and can account for movements within the engine. It does not explain how the car moves. Combustion, motion, momentum, force, friction, transfer of energy etc....A greater vocabulary usually facilitates greater understanding.

Notwithstanding, some understanding does occur on a mental level and requires no vocabulary.

MINDISM

A most reasonable and rational explanation of Existence. Using the information available from the science and maths of today. The rest of this work is a more detailed explanation of what follows.

Leibnitz used the term 'Monads' to define the First Causes from which an understanding of Existence itself can arise and develop. They are outside the dimensional realm of Spacetime and physical matter which manifested from a Singularity, by current scientific calculation, around 14.5 billion years ago. The non dimensional realm of Monads pre-existed the Big Bang and were the cause of it.

They continuously produce all the energy that exists in the Universe. The Universe, within my understanding, is the combined existence of the dimensional and non dimensional realms. They are 'separated' by the concept of a form of barrier, it is called The Zero Point Field.

Monads generate the full complement of waveform frequencies that coherently and concordantly produce a (potentially harmonious) Universe. An act of asymmetry within this nondimensional mental realm manifested. The state of mental perfection that can be regarded as the Mind of God caused the Big Bang to occur. The sum total of all individual monads, (which Leibnitz also referred to unofficially, as Souls), having achieved their own Omega Point of Success, Total Enlightenment , manifested The Mind of God (for want of a better term). It has taken an Aeon for this situation to come about. Each separate monad has been on its own journey, to regain full symmetry, ie a total balance of all the energy /information inherent in its form. Monads certainly do not all achieve this endpoint in concert with each other. Each MonadicSoul is on its own 'journey' and its journey from unconscious to full and complete consciousness results in it achieving 'godhead' (total symmetry) within itself. It is now a constituent part of what will become The Mind of God.

When all MonadicSouls achieve this state, (which is the purpose of their individual journey, godhead) the Mind of God comes into existence and is Existence. It knows and understands everything, it is everything, all knowing, and it will manifest an act of Asymmetry which will, by mathematical certainty, affect each and every separate MonadicSoul.

The energy forces released by this destabilising act of asymmetry, within the nondimensional realm of waveform energy frequencies, manifest the Big Bang. Energies are released, and the immense forces generated, condense a lot of those waveform energies into relatively solid bodies which not only have mass but also generate their own fields of energy. They form and constitute the dimensional realm of existence, ie SpaceTime and the physical cosmos. The dimensional realm is separated from the non dimensional realm by the zero point field. It contains the higher energy frequencies, keeping them within the non dimensional realm and it, the zero point field, is a stronger force than these high frequency waveform energies and thus resists and stops their passage through it.

We see what happens when this barrier is momentarily ruptured by an atomic explosion... In my estimation, not a good idea.....allegedly before the first one was given the go ahead, it was feasible that it could have ended the physical world as we know it.

Lower energy frequencies can pass through the zero point field. The zero point being one step beyond the infinitely small realm of measurement. Measurement is dimensional, Leibnitz's mind apparently went down to this point, in that he brought us calculus, as it is understood to this day. A tool for measuring the incredibly small, enabling subsequent mathematicians to calculate and eventually predict the quantum realm. Quantum Physics challenged Isaac Newton's clockwork dimensional scientific paradigm that became a 'certainty' during the nineteenth century. Despite the role of mind being taken out of the equation, paradigms are mental, not physical.

From 14.5 billion years ago when SpaceTime started, until 4.5 billion years ago when the planet we live on materialised, the non dimensional realm of MonadicSouls had, via a dialectical process, manifested the concept of Mind. Each MonadicSoul, producing frequencies represented by Euler's Formula, defining the unit circle, the basal point of frequency production. Each individual frequency, separated from the next by a unit of non dimensional 'measurement' [possibly corresponding to Planks Constant], emanates from this central MonadicSoul. The nondimensional realm is a Plenum, completely filled with this infinite number of monads. Each one generating a full range of frequencies and each one interfacing with the monads in their immediate proximity. This mathematical pattern can be represented by The Flower of Life. The centre of each 'flower' representing a MonadicSoul. This is within a realm, outside Spacetime, beyond our conception and comprehension. However, our mind is able to rationalise the theoretical consideration of its existence. It should be able to, it is striving to recognise and understand itself. It is on a mission, a self solving equation that is represented by 'the Journey of the Soul'.

The resultant waveform frequencies interact with each other according to the inherent information that is the flowing point that determines the waveform. A simple sentence, an amazing concept.

The waveform, whatever frequency it is, follows a defined continuous path, that path is defined by the flowing point at the 'head' of the waveform frequency. **The flowing point is a bundle of information that defines the path it will follow.** It is perpetual motion.

The wave/flowing point continues until it interacts with another bundle of information. The type of information determines and defines the interaction. Some waveforms will not interact because, as with like poles of a magnet or indentical electrical charges, they repel each other. Others interact in a dialectical manner determined by the inherent information. Assigning

numbers to each individually different frequency is the basis of Pythagoras's statement that "all things are numbers". It accounts for the mathematical basis for analysing and understanding the world we live in. Numbers are dimensional representations of non dimensional phenomena. Mathematics in the language of the Universe, it is the tool used to dissect and understand its inner workings.

Non dimensionally, there are, initially, flowing points interacting in simple mathematical patterns. Information is either exchanged between the flowing points or it isn't. Subsequent interaction becomes more complex. Dimensional activity has corresponding non dimensional activity. Not all non dimensional activity has corresponding dimensional activity, as I understand things although I could be wrong on that point. Non dimensional activity is entirely mental and cannot, by definition be physical. The human mind is mental not physical, it is not just a manifestation within the brain as this work will demonstrate, should you not already realise that to be true. A single frequency, its path defined mentally, can be visualised with our human mind (purely to develop an understanding of what it is) as being a one dimensional flowing point. A bundle of energy/information defining itself. Its path, the frequency it traces, is non dimensional.

When we examine frequencies dimensionally we can assign 'phase shift' to them. Phase shift enables a two dimensional wave to create the concept of the third dimension. The one dimensional point is the smallest possible thing in dimensional reality. The two dimensional line, connecting two points, when extended to infinity becomes a circle. Circles and other geometrical shapes have a dimensional structural form and their areas can be calculated. Add phase shift to a circle and you can create a sphere. Phase shift in the dimensional realm enables the third dimension to be perceived and volume to be calculated.

Non dimensionally, information produces forms, dimensionally it produces shapes. Structure is inherent in both form and shape, in

the former it flows and in the latter it is a combination of fixed locations in SpaceTime.

Non dimensional information inherent in the flowing points dictate its interaction with other flowing points. An increased complexity of interaction occurs, following defined paths, simple mathematical activity becomes more complex. Two flowing points interact in a dialectical manner, that is why the dialectic is such a useful tool, facilitating an understanding of the nature of mind. Their interaction produces another new packet(s) of information, a new flowing point, a frequency waveform that will continue on its new path to interact with other flowing points it comes into contact with. Frequency A interacts with Frequency B to produce Frequency C.

Alternatively, two flowing points interacting may produce two or more subsequent 'points of information', additive and/or subtractive resultant forms. Frequency C interacts with Frequency D to produce Frequencies A, C and E.... The complexity continues because they are flowing points, perpetual motion within the non dimensional Monadic realm. Then more complex interaction occurs, more complex patterns, and more complex mathematical formula can be assigned to them. Functions, algorithms and more. All following set, defined, determined, dictated pathways. These more complex waveform frequencies are more complex packets of information. They interact with other frequencies...increasing complexity accordingly. 'If statements' manifest. If this frequency interacts with that frequency then a certain outcome will arise. Many many if statements...predetermined by the preceding interactions/activity.

It is intelligence within itself. Certainty of result of interaction of information with other information. Predictable mathematical certainties. Absolute Truths in a realm that exists outside our comprehension of the infinitely small. This hyper complex form of information exchange and its outcomes is the basis of intelligence, it is within and manifests from the potential of the MonadicSoul.

Eventually a form of intelligence manifests that one can comprehend and relate to, it is the concept of a mind manifesting and emanating from within the MonadicSoul. The MonadicSoulMind has manifested. It is 'outside' the MonadicSoul. Its inherent intelligence a mathematical certainty. Information arising from within itself has created the hyper concept of an intelligent entity that we call Mind. It is, at this point in dimensional time, Mind, per se, is still totally contained within the nondimensional realm. Although some individual frequencies can always pass through the zero point field, possibly in both directions, dimensional reality in the evolving cosmos has probably not yet begun the formation of planet earth.

When it does eventually form, it is the product of condensing physical particles bound together by physical forces and gravity, and produces the constituent elements that planet Earth is comprised of. These elements are defined by the Periodic Table, and Chemistry is the science that defines and analyses their interaction. More than one hundred elements, all having a unique atomic structure of their own...(whatever that is, for it changes in concept and theory with time). If and when the individual atoms of these elements combine with other elemental atoms, molecules are formed. These molecules are large enough to have three dimensional structure. Some of these molecules are detected by our physical senses which perceive and respond accordingly. Conditions on planet earth three billion years ago were still pretty harsh and physical forces were causing a wide variety of molecules to manifest. These conditions have been replicated in the laboratory by scientists attempting to demonstrate how DNA first appeared on this planet. Scientists have attempted to recreate the primordial soup that enabled life to manifest. Abiogenesis is the term used to define formation of the beginning of life as we know it. These scientists can create various Nucleic Acids (vNAs), when replicating these primordial conditions, but DNA is beyond their ken to date.

Here is my take on the matter.

Organic carbon molecules with their inherent hexagonal structural shape enabled nucleic acids to subsequently form. The carbon ring is a stable happy state for carbon atoms to form. Within these hexagonal structures microvortices can manifest.

A vortex, represented in the pattern that galaxies form, also macroscopically as whirlwinds or tornadoes, exhibit downward gravitational energy forces and which also have opposing energy forces that can lift houses and rip trees out of the ground. A vortex is a two way flow of energy.

If one considers that that form of energy that is the tornado, are waveform frequencies in huge numbers with their associated forcefields manifesting in the macroscopic physical environment. Then consider also, that they can also manifest microscopically within the molecular environment. This energy/information also flows in opposing directions. A micro vortex generated within a hexagonal molecule by its inherent shape and associated force fields, can, especially if it is in a liquid medium, can 'catch' waveform frequencies within that medium and move them in opposing directions accordingly. The liquid medium of choice on planet earth is water.

Individual units of Light, as we know it, are defined as photons. Massless, complex packets of energy/information. When they hit leaves, for example, most of the energy/information is absorbed and used by the cells, the rest is not absorbed and bounces off as reflected energy. This reflected energy is a bundle of waveform frequencies of energy/information that can enter the human eye. Specialised receptors in the wall within the eye respond to these wavelengths of energy and the information is relayed to the brain via the Optic Nerve.. The nerve cells also relay the information to the mind through the DNA, and what we see, what the mind 'sees', we define in the English language, as the colour green. Traditional water diviners were people with a skill handed down and respected within local communities that depended on the accurate locating of underground water sources. Digging a well to

access the water is time and energy consuming. Is there a part of the brain that we can be sure of, that is controlling this natural ability of the Water Diviner? When I was having a house built in rural Spain, I came across such an individual.

His brain/mind enabled him to not only place a stone on the ground, marking the location of where to dig, but also for him to stand 20 metres or more away from that point with his back towards it. Then, when my friend irregularly walked around that area, the diviner was able to shout out and tell him, most accurately, when he was standing at the marker stone. Define Divine. Frequency waveform interaction is defined by its inherent energy/information, mind is an entity that responds to waveform information. The Water Diviner has a mental skill. Mind is Divine.

I digress....

Photons hit water, a rainbow of colours can be seen, same as if they pass through a pyramid shaped piece of glass. (Dark Side of the Moon album cover, by Pink Floyd). To put it another way, a complex packet of energy/information interacts with a molecular medium, water, and is broken up into smaller bundles of information. A super complex waveform is deconstructed into smaller units, smaller frequencies, some of which are then caught in the micro vortex within hexagonal molecular structures within the water [nucleic acids]. They are caught up in the vortical forcefields and the velocity of those forced downward, proportionally increases as the basal point of the vortex is approached. The basal point of these microvortices can find zero points in the same manner as a leech, placed on the body will locate an acupuncture point. [That is one of, if not the main reason that leeches were used medicinally so long ago in the past in Europe and are still used today in Russia.They know where to go...]

The information waveform frequency passing through the zero point enters the non dimensional realm of MonadicSoulMinds. A new source of information external to the inner workings of the

Minds is introduced to them. Previously they have only used their internal information source to manifest their intelligence and understanding. The channel formed by the vortex [a portal] is two way, information can be 'sucked up' from the non dimensional realm. Crystal structures also facilitate the flow of energy from the non dimensional realm into the physical world. Nucleic acid structures enable and provide a two way flow of information exchange. A Monadic SoulMind, using its inherent intelligence can harness this channel and send information back through it. What sufficient reason is there to not consider this feasible? The evolution of Understanding has taken a quantum leap.

If this MonadicSoulMind sends a unit of information back to the molecular structure than originally communicated with it, what will happen next? Albeit that this initial communication is determined and resulting from the Laws of Physics on planet earth and a two way energy portal, created by the physical molecular structure. What will happen next?. Curiosity and intrigue, the basis of experimental science is a manifestation of our mind. Subsequent communication will continue if possible with Mind sending information back through the portal. What will stop the two way flow of information? Destruction of the Molecule and/or its watery environment. Evaporation and the total loss of water is one consideration.

Also on the surface of planet earth in the chemical soup that the Laws of Physics and Chemistry combine to create, are molecular structures defined as Lipids (Fats and oils). A lipid film on the surface of water can, in certain conditions, encapsulate, especially if the water present reduces in volume, and following the laws of physics, a spherical shape is formed. Should this encapsulation trap a nucleic acid (NA) within its spherical form then a structure now exists that has an outer lipid layer containing a vNA inside it. It is the most primal 'cell body' one can imagine. The 'Precell', a precursor to the first single cells that we know and love today. Physical environmental conditions can cause rupture and 'death' of this structure. The SoulMind loses it machine to communicate

with, it loses its opportunity to collect more information from the dimensional realm. It wants to understand more, it 'misses' this new found friend. Another opportunity arises from another Precell. If conditions favoured the creation of one such entity, what sufficient reason is there consider that many such bodies won't also exist. By slow trial and error, (akin to Lamarkian evolution) a process of designing, engineering and building a specialised NA occurs. The intention is to create and to produce a molecule that can withstand environmental forces that hitherto destroyed previous NA structural forms created by the SoulMind. Eventually a robust vNA that 'ticked all the boxes' was formed....a deoxyriboNA. DNA was now available on planet earth. Life manifested, by Life I refer to the two way information flow between the complex molecular structure, that primal cell body, and the hyper complex SoulMind that engineered the physical matter and designed structures to sustain its physical existence.. Mind and Matter in Concert...

. Sounds like a rock band...if they went on a tour it would be called the "Life Manifests" world tour....

It is irrational to consider that physical molecular structures designed, engineered and built Mind...

SoulMinds share information, some call it The Collective Consciousness.

Sequences of DNA can be removed from a 50 million year old fossil and it still does 'what it says on the label'. The protein it codes for can be constructed from the genetic information. Genes build proteins and also convey inter dimensional energy exchange. DNA, a seriously sturdy physical structure, add water and we have a two way communication machine enabling information to pass to and fro between the two dimensional realms. Information feedback loops are established, awareness is defined and develops accordingly.

Maybe other molecular structures were also captured within this act of encapsulation and they evolved to become organelles within the cell body performing tasks to attempt to ensure its

maintained existence. Maybe they were engineered by Mind, maybe both....We can but speculate as to what was happening with these primal life forms at that stage in time.

Two NAs increased the information exchanged between Mind and Precell accordingly. Two DNA molecules are better than one. Two minds are better than one. As above so below. Apply a developing intelligent control of these processes evolving over billions of years and the most simple cells (prokaryotic) with free floating DNA will manifest. They were probably on this planet 2 billion years ago.

Some of these evolving structures did not need an outer lipid layer that acts as an outer casing, protecting the contents from the physical world beyond it. Viruses contain the same DNA molecules (called Bases) as the most primitive simple single cells we find on the planet today. Single cells needed to be aware of their environment in order to survive the developing competitive and harsh environments they found themselves in which included the subsequent appearance of viruses. In this theatre, performance determined survival.....or not...

The rest is history, or Biology, biological evolution, to be more precise. With a mental evolution paralleling the physical evolution.

Hence Mindism.....maths, science and philosophy combining to explain the 'religious' experience, Spirit manifesting as Life and Life manifesting as Spirit, ultimately everything we experience is a manifestation of Mind. And Mind is a manifestation of the activity of the post Big Bang asymmetrical Monadic Soul.

By definition, explanation is not really possible without words. Complex sounds originally projected by a voice and subsequently put into symbolic shapes, letters and words. It requires understanding to assign meaning to words, thoughts, ideas, and simple concepts. An increasingly deeper level of understanding is required to grasp complex concepts and abstract hyper concepts necessary to comprehend the True Nature of Existence.

Understanding, paralleling the evolution of Mind (and bodies) evolves in 'layers'.

Single cell organisms existing before multicellular organisms. Multicellular organisms existing before cell differentiation was possible. Cell differentiation giving rise to individual organs within the evolving multicellular structures.

To understand algebra we have to understand addition and subtraction. To understand how to control and maintain the life in a multicellular structure it was necessary for SoulMind to first learn and understand how to develop control mechanisms within the single cell. Mind subsequently manifested a complex information storage system (memory) to access and refer to, enabling more efficient decision making processes to evolve. Hyper complex versions of if/then statements. More complex modus operandi developed more complex organisms. A process occurring over an immense period of time, maybe more than 2 billion years... They have corresponding structural forms on both sides of the bi-dimensional realm of existence.

Larger multicellular organisms, plants, trees and animals, manifested minds that we can consider to be the spirit counterpart of the physical body. SpiritMind manifested. It interfaces between the physical body above to the SoulMind below.

The only immortal aspect of this entire explanation is the MonadicSoul. Everything in existence manifesting from the MonadicSoul Collective. The Monadic Collective is the Non Dimensional Realm of Existence..

I am human, I have a physical existence, my body will die, my memories will continue for as long as they remain impressions recorded in the memory of my SpiritMind. When the SoulMind has no further need of them, it will have gleaned all possible understanding from them, it will relinquish their existence. When the MonadicSoul has gleaned all the possible understanding from its SoulMind it has fulfilled its purpose, it is fully Conscious, (or whatever words or symbols you choose to use to define this

ultimate state of mind, eg omega or godhead). Then the MonadicSoul has no need to reincarnate through another life form.....it relinquishes its SoulMind with the death of its final incarnation, transformed , sort of like the butterfly from the chrysalis, it is at one with itself, fully Enlightened, totally Illuminated, total symmetry has been regained, total harmony, totality within itself. It can now share information with other less evolved, less journeyed Souls with their SoulMinds attached, it can facilitate their Journey...

It is not a race, it is not a game, there are no winners and losers, the mental process occurs non dimensionally, outside Spacetime....this is the story and an explanation of existence. Herein is more information to facilitate your understanding....

becoming coordinated in what we call the brain. It evolved accordingly. The physical evolution of the brain occurring in parallel with a mental evolution, an increasingly complex physical structure corresponding to an increasingly complex mental structure. Behavior programmes laid down in early life being Primary and more deeply impressed into the mental landscape. The appearance of the 'mammalian' brain superimposed on the 'reptilian' brain below it will have corresponding mental attributes. 'Reptilian' behaviour programmes became challenged by mammalian ones... potential conflict within the mind starts to arise within the part of Spirit Mind that in humans we refer to as 'the subconscious'. Add a complex outer cortex incorporating the emotional mental frontal cortex and the potential conflict of pre established behavioural programmes will manifest. If the human brain/mind complex is not given accurate information and the correct nurturing during its developmental phase, then it will develop dysfunctions accordingly. It takes 25 years for the brain/mind complex to finish growing, as to when it reaches maturity is an academic consideration... personally I would say at around the age of 42 years.

smart...however, what is super intelligent about the behaviour of amoebas is apparent from their activity upon animating from the amoeboid spore. When the structure formed by the amoeboid collective emits the myriad of amoeboid spores in a laboratory, where this is no wind or watery movements, the 'spores' fall to the ground around the structure in two concentric circles. 66% are in the outer circle, they are amoeboid spores, 33% comprise the inner circle, they did not travel so far because they are heavier... they are heavier because inside the amoeboid spore are also 2 or 3 bacteria in suspended animation. When conditions are right, the amoeba and the bacteria animate, the amoeba recognizes the bacteria as food..... but it does not eat them, it farms them... that is intelligence... no brain involved... only a Mind....and a single cell organism. I digress....

With the appearance of multi cellular organisms the MSM can now really begin to facilitate the MS on its journey to restore full symmetry within its existence. The more complex the multicellular organism the more the mind has to learn in order to understand and control it. The MSM can now start to look for more evolved multicellular organisms to connect with at conception.

Now Mind starts a new level of complexity in association with the multicellular organisms. The Spirit Mind with its associated Understanding and Memory develops. Super complex multicellular organisms take longer to learn to control and understand their potential. This requires the MSM to reincarnate within the same species more than one time. the more complex the animal, the more reincarnations are necessary to achieve the omega point of 'Knowing and Understanding' all there is to be learnt from that species. [ie a genetically programmed level of mental/physical organization of Mind and Body]

12) the last half a billion years of existence has seen the appearance and demise of countless lifeforms. Cell differentiation, different roles for different cells facilitated the variation of forms that appeared. The innovative role of the neuron and the subsequent development of specialized receptors enabled the Mind to accumulate information from the environment from many different sources [senses] as well as enabling different parts of the body to communicate with each other. This extra information is now

form that they still exist today, one and a half billion years later... Consider the type of changes, the range of changes and the rates of change and you can see that the timeline produces a unidirectional flow of increasing complexity. Allegedly all about Survival....but maybe it is about Learning, accumulating information within the mental level of existence. Maybe it is not so important for Mind as to which species survive and which ones don't, enhanced learning seems to be more the order of the day than just basic survival. The evolution of Mind may be more significant than the evolutionary development of species. This becomes a more philosophical and spiritual matter for discussion maybe in Part 2.

2 billion years of physical and mental evolution and development. Mind has expanded, each MSM expanding in accord with mental and physical growth. Physical growth is an expansion with SpaceTime, Mental growth is expansion in line with the philosophy of 'Hotel Infinity' [Hilbert's Paradox]. Levels/layers of inherent Understanding and associated Memory have evolved within the MSM. They develop in line with Mind learning to interact with and direct activity not only inside the cell body, and also in order to control the movement of the cell body within the physical external environment.

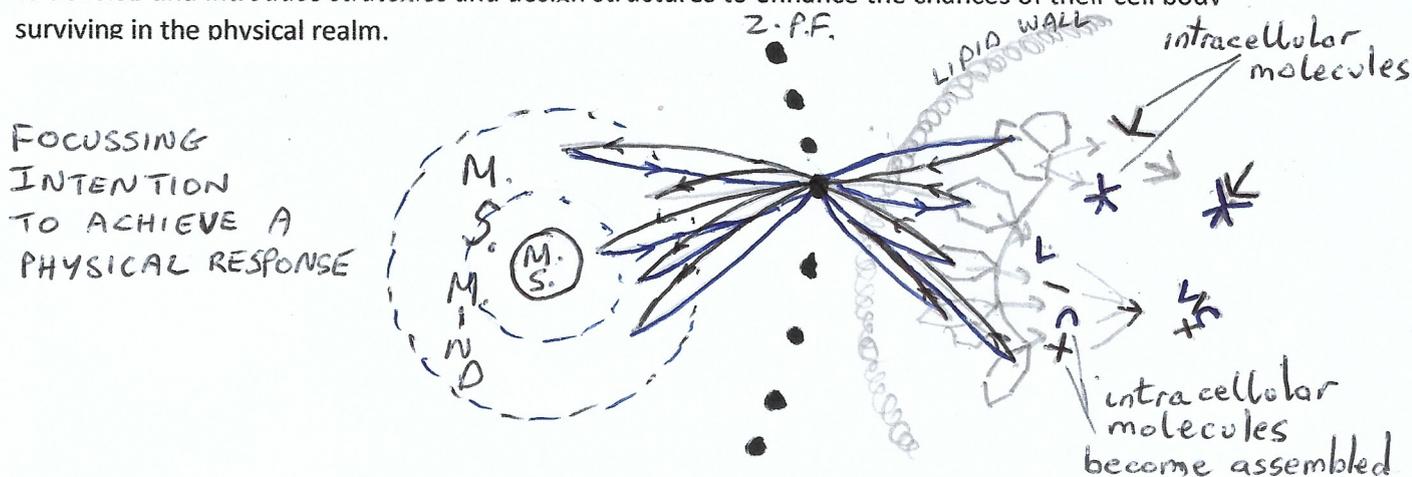

11) A billion years ago there are only single cell organisms on the planet, but there are two very different forms that have evolved. . The original single cell bodies had free floating chains of DNA within the cytoplasm. They are called Prokaryotes. This limited their size, information not passes through the DNA molecule but also along the chain of DNA molecules we call a chromosome. Information travelling along a chromosome is at the effect of dimensional SpaceTime. Although it is true that the helical spiral of the DNA chain and its protein structural support is the most efficient form for energy to travel along, it still takes time. And in the world of the single cell and the superfast speeds of molecular behaviour, travelling from one part of the cell to another part means travelling a long way...

Eukarotes appeared on the scene a long time after prokaryotes. Their DNA is encapsulated with the nucleus at the centre of the cell body. They all have Mitochondria within their cytoplasm. Mitochondria are the 'power stations' of the cell producing the 'electrical' energy that the cell used to sustain its existence. Every human cell contains at least 1000 mitochondrial bodies... Mitochondria have their own DNA because, way back in the day, they were single cell prokaryotic cells that existed in their own right. A symbiotic relationship with primal eukaryotic cells ensured their existence on the planet in perpetuity. Another philosophical consideration for another time is that we have far more mitochondria in our bodies than we have cells of our own, with our own 46 chromosomal complement. We also have far more bacterial cells within our own body than we have cells of our body.. if their DNA is not connected to our Mind, then what?....

Just as 2 DNA molecules were more efficient than one, so it is that a multi cellular organism can accomplish for more than a single cell organism. So, once again, intelligent trial and error eventually produced simple multicellular organisms. Amoeba, fundamentally a single cell eukaryote, demonstrated *Some* aspects of multicellular activity. This occurs in order for the amoeba to reproduce. Originally it was thought that amoeba only reproduced by mitosis, a simple doubling of the cell body. One cell body doubles the amount of DNA and then divides into two identical cell bodies. More recent studies show that amoeba can somehow communicate over distance with other amoeba and a large number of them amass to form a multicellular structure which undergoes internal transformations. When mature, this structure emits huge numbers of 'amoeboid spores' which flow with the wind and water and when conditions are right they animate and become living amoeba. This is an example of intelligence that predates neurons and brains.... It is quite well known that ants farm bacteria and aphids, and that this is most certainly a form of intelligence. Some species of amoeba farm bacteria. That is quite

sends energy/information/objects in two opposing directions. A two way flow of Energy. A single vortex will create a 'micro-portal' through the Zero Point, a significant number of vortices acting in concert will manifest 'macro-portals' or what are commonly referred to as Chakras.

9) The concept of 'Will' is emerging. Will is Minds intention to manifest a physical event/action in the Primal Cell. Will is Mind intending an action to occur. Each MSM is wanting more efficient communication with the Primal Cell. It wants to learn more. it wants to understand more and it is learning that in order to exist it needs to maintain the Primal Cell Body, to keep it intact and enable it to survive the harsh physical environmental conditions outside of the Cell Body. The Will to Survive eventually becomes what Nietzsche referred to as Will to Power. The Will to Survive creates the concept of competition. Competition for physical resources, the molecular building blocks of the cell body and its internal organelles, parallels in the non physical realm of existence. Minds use their inherent intelligence to develop and introduce strategies and design structures to enhance the chances of their cell body surviving in the physical realm.

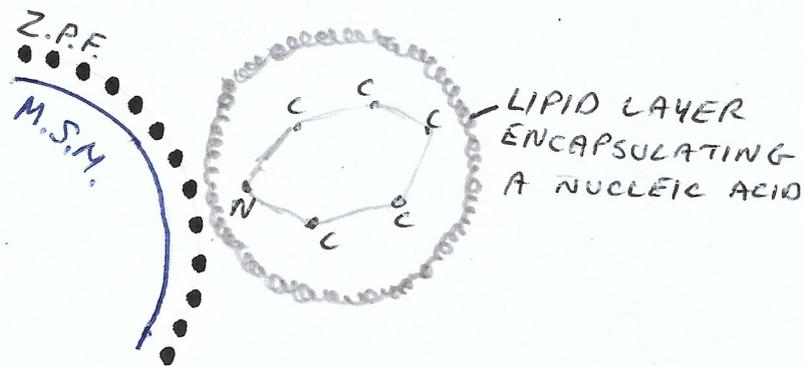

10) Now, ie around two and a half billion years ago, [plus or minus half a billion years], the process of decision making resulting from feedback loops based on 'trial and error', 'learning in the dark', 'if this, then that' statements has produced life forms that are relatively complex single cell organisms. Competition and cooperation are both seen as successful strategies for survival, sometimes one being more beneficial than the other... The molecular building blocks for the cell body, [food] come from three sources

- A) Freely available raw materials in the environment external to the cell body.
- B) Synthesized inside the cell body by a 'factory' designed and built [and subsequently improved] for the purpose of synthesizing/building larger molecules from smaller ones inside the cytoplasm. the intracellular fluid contained within the cell wall. These different factories are the organelles within the cell body, The Endoplasmic Reticulum, The Golgi apparatus and Ribosomes.
- C) Ingest a foreign cell body. break down its life support systems [kill it] and recycle/use the molecular building blocks of its physical body to sustain its own physical existence.

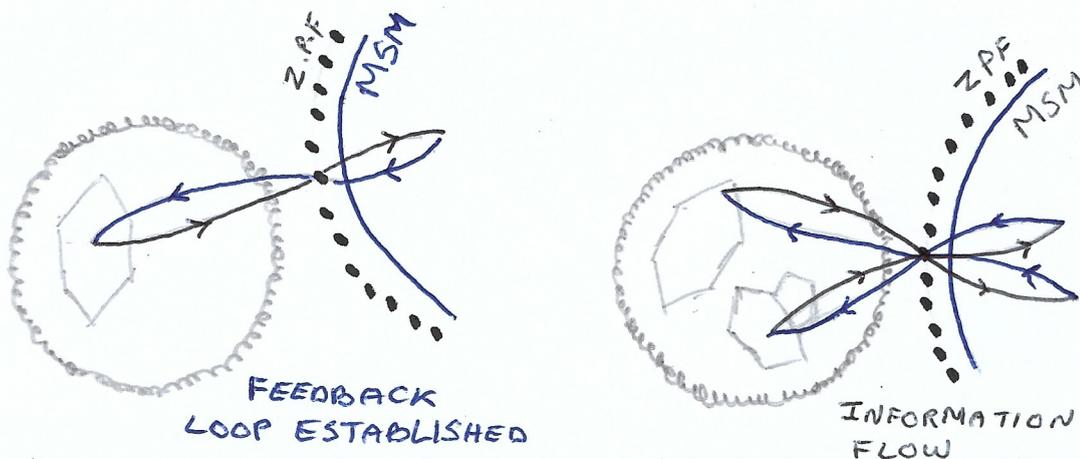

A billion years of trial and error activity directing and controlling behavioural development of the physical cell body has a corresponding billion years of mental evolutionary development of Understanding and its associated facilitator, Memory. Put this in perspective. A billion years of development to produce a relatively complex single cell organism... It only took half a billion years for simple multicellular organisms to evolve into human beings. That degree of change over time is immense. So, consider the changes that occurred within primal cell bodies to become so viable a life

7) Some of these Nucleic Acids will become encapsulated by oily Lipid molecular films on the surface of the water when either evaporation or other physical forces (eg waves) causes 'bubbles' of lipid molecules to form

8) The Primordial Cell has manifested on the surface of Planet Earth. Some MSMs are trying to establish a constant 2 way feedback information exchange with the Nucleic Acid [NA] either encapsulated or not by a lipid membrane. This basically 'trial and error' system of activity of the MSM will lead to small changes within the molecular structure of the NA. Eventually a structure is formed that resonates most positively with the MSM. This new structure is most robust, can withstand period of drought without denaturing its structural form. such that. when water is again present. the molecule is unchanged and 'ready to go' with regard to receiving and sending WIFs through the Zero Point Field. It is a Deoxyribo Nucleic Acid, our good old friend DNA. Now here to stay.... Life is truly starting to manifest on planet Earth

On a 'timeline' this is probably around 3 Billion years ago. give or take half a billion years.

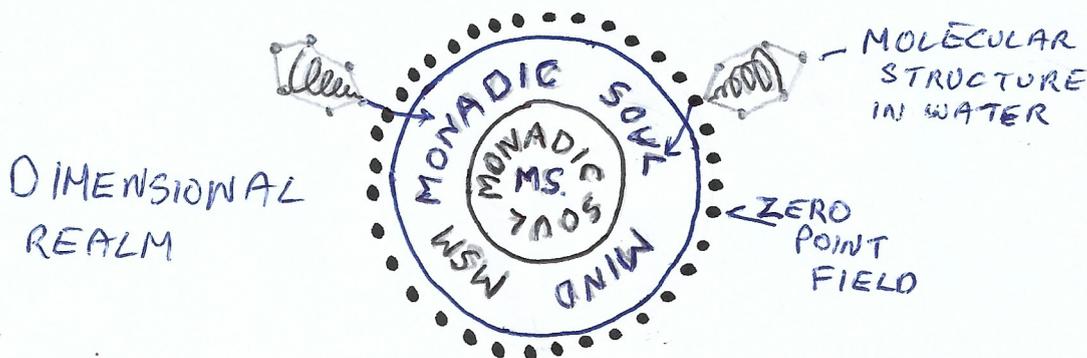

MSMs that exchange information with a Primal Cell that has 2 DNA molecules encapsulated within the lipid membrane will exchange twice as much information as a Primal Cell with only 1 DNA molecule within in. these Minds will become more efficient at information processing. Now there is a reason to accumulate DNA molecules. Information will flow through the Vortex at the effect of SpaceTime, it will enter the MSM and be processed outside of SpaceTime. The response that the Mind generates re-enters the Prial Cell through the DNA and the two way channel that is formed through the Zero Point by the two way flow of Energy that results from the structure of a Vortex. Tornadoes vortex Energy and objects downwards and well as tearing trees and houses out of the ground with the upward force. A vortex

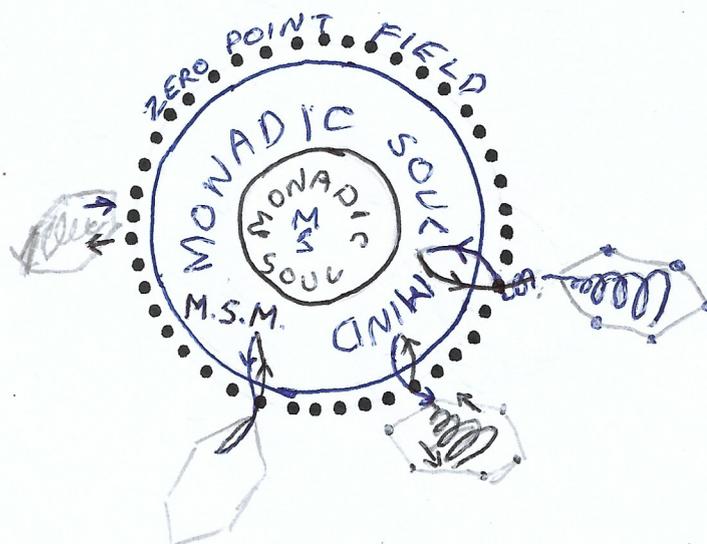

Hypothetically, the Monadic Soul Mind [MSM] has become aware of itself. Each Monadic Soul [MS] having its own Mind. At this Point in Time, Planet Earth has probably not come into existence or is only at its earliest formative state. The source of virtually all information available to MSMs is Non Dimensional

5) With the formation of Planet Earth, theoretically MSMs will receive some information from the Dimensional Realm as it enters the Non dimensional Realm through the Zero Point Field. With Time, macroscopic molecules have formed and some of those molecules located in watery environments generate Vortical Fields [Vortices] which can send WIFs in the physical, Dimensional Realm, through the Zero Point Field, into the mental, Non Dimensional realm of Mind.

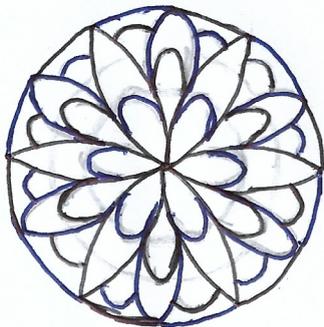

The MSM, upon receiving this information. Knows that it has come from a source external to the realm of the Monadic Soul Collective. This information is a form of Light. It has come from the Sun, there is something within it/about it that informs the MSM that the source is external to the Monadic Collective. The Mind is interested to learn more about this phenomena. It comprehends the phenomena, it wants to Understand it. Understanding is manifesting within the MSM.

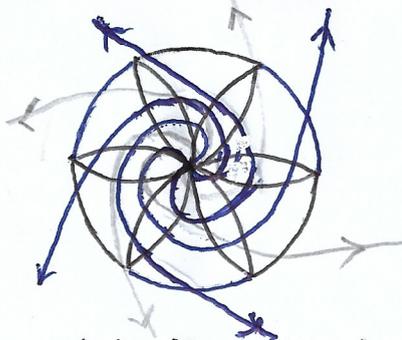

6) The MSM is learning to communicate with these Dimensional molecular structures. Some of them will be Aromatic Carbon rings, hexagonal molecular structures that manifest a vortex of few as a direct result of the nature of their atomic 'configuration'. It is this configuration that forms/defines the molecular structure. Nucleic Acids are also present in this Primordial Soup, they too have a hexagonal molecular structures with associated vortices

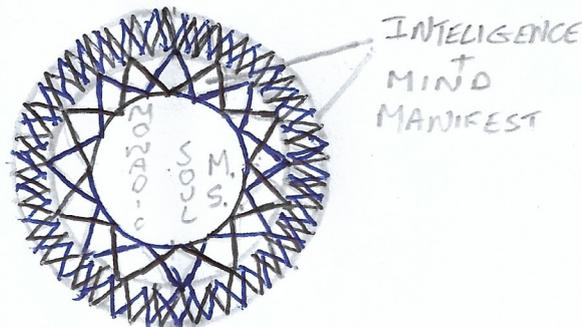

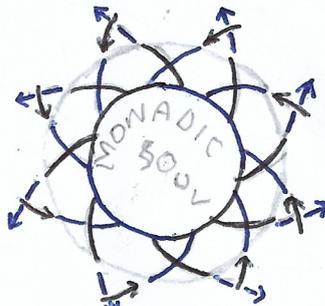

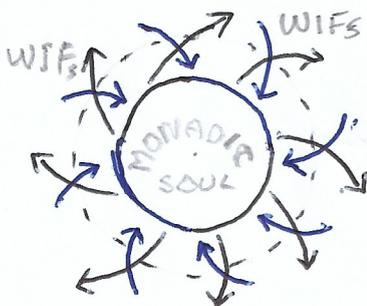

1) The Monadic Soul immediately before the Big Bang. All Energy Balanced in Perfect Harmonic Coherence

2) The Monadic Soul immediately after the Big Bang. An 'Act of Asymmetry' within the Monadic Soul Collective having created the Big Bang

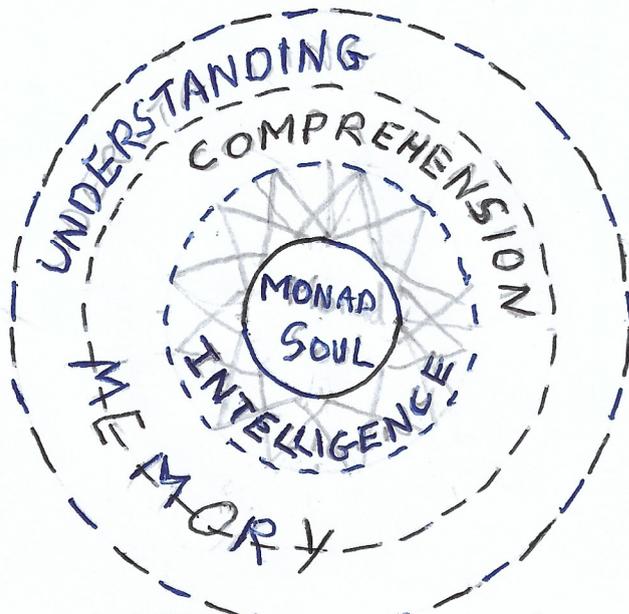

3) The Monadic Soul, [MS] outside SpaceTime, increases its complexity of Form as Waveform Information Frequencies/Energy [WIFs] outpouring from within it, interact with other WIFs that they now will connect/interact/combine with now that Coherence is disrupted. WIFs are all forms of Energy. This interaction follows (mathematically) defined paths and patterns. The concepts of Intelligence and Mind are forming.

4) The Monadic Soul Mind [MSM] is formed when the threshold of this complexity manifests the concept of Comprehension. In this definition, Comprehension, a fundamental property of Mind, it underlies Understanding which will develop subsequently. The defined paths and patterns of interacting WIFs is the manifestation of Intelligence within the evolving MSM. The MSM is formed because the comprehension of the inherent order of events arising in due course from WIF interaction is itself a manifestation/form of Intelligence

WIFs come from within the Monadic Soul and also, due to the Act of Asymmetry, from other MSs that constitute the Plenum that is the Monadic Soul Collective. The MSM is enabled to form because of information arising from a source outside of the Monadic Soul. An order of complexity is established/formed from the centre outwards, these 'layers' or 'levels' will subsequently correspond to layers/levels of Understanding.

THE INNERMOST LEVELS OF MIND. MANIFESTING FROM THE MONADIC SOUL WITHIN.

MEMORY MANIFESTS

INTELLIGENCE + MEMORY + UNDERSTANDING =

MSM. Spirit Mind is specific to the individual organism and its life time. When the body dies, the Spirit Mind loses its connection to it but, being non dimensional and an emanation of the MSM it does not dissipate with the death of the physical body... why should it?

The MSM, is now looking for another cell body to connect to... it picks up signals from the Dimensional Realm, it can recognize the signal of a fertilized egg ready to receive connection with a MSM to continue the 'Journey of the Soul'.

Another incarnation starts, the MSM is still connected to its previous Sprit Life Memory [SLM], as well as earlier SLMs, however, its focus is on the new life incarnation that it has connected to... how previous Spirit Life Memory can affect the present incarnation is a philosophical discussion for Part 2...

produced a corresponding increase in complexity of the Monadic Soul Mind. Eventually a point was reached when the most primitive form of Spirit Mind manifested, it was significantly different to the MSM because the MSM has the aspect of immortality, it preexisted the cell body and when the cell body died the MSM continued its 'journey'. Spirit Mind is specifically connected to and manifests from a single incarnation of physical existence.

Genetic variation enhanced survival chances in changing environmental conditions. The appearance of 'sexual' differences, ie male and female variations of form, was originally for the purpose of further enhancing and increasing genetic variation. Mind manifested male and female, hundreds of millions of years ago... it is something to bear in mind....Increased variation, more complex bodies and more complex mind.

It required a mind specific to the physical body to ensure its survival in the physical realm. Multicellular organisms evolved eyes, [eyespot are found on single cell organisms] and other senses developed. Seeing facilitated the manifestation of Spirit Mind, there was more to be remembered and it was beneficial for the organism to remember and respond to some stimuli without disturbing the MSM too much... complex cells and simple multicellular organisms require massive organizational control. The evolution of sensory apparatus, smell, hearing, touch, temperature control etc, further enhanced complexity of the organism. Part of the role of the MSM is maintaining cell metabolism and it is most important for the MSM to keep its connection with the cellular machinery that protects and maintains DNA function. Control and monitoring the internal environment was more important and more 'easy' than controlling the external environment. As organisms became larger this statement was challenged. Sensory input facilitated survival... neurons evolved, brains appeared and Spirit Mind could start to create the concept of Spirit Self...

So Spirit Mind developed to handle a lot of the workings of the daily activity of this more complex organism, plants have become quite complex, animals have evolved, limbs have evolved, a more complex form of control and storage of information is necessary for maximum efficiency to be maintained.... So, for the sake of discussion, definition and possibly, truth, Spirit Mind is now a real manifestation and becoming separate from, albeit intimately connected to the

THE EVOLUTION OF MIND

After the Big Bang, Mind starts to form around each Monad/Soul as a natural sequence of Waveform Frequencies interacting with each other. This interaction occurs because the Pure Symmetry of the Enlightened Soul has been broken by an 'Act of God', an 'Act from within the Fully Enlightened Soul'. The interaction continues and manifests what we have come to describe as 'Intelligence'. The paths and patterns of information flow are dialectic in their making, ie one frequency interacts with another one to produce an outcome... and that outcome will always be the same when that specific frequency interacts with another specific frequency. These then 'predictable' paths and patterns occurring non dimensionally in a realm beyond 'small', build up, to enable predictable outcomes to eventually be realized by this evolving intelligent entity which we call Mind.

As this evolution continues, the 'realisation' becomes a form of Comprehension and Understanding manifests within this Mind which itself is an extension of the Monad/Soul. The Monadic Soul is manifesting Mind, a Monadic Soul Mind, [MSM] specific to the individual Monad.

Eventually this MSM receives information from a source outside the Non Dimensional Realm, the Non Dimensional Realm is itself a Plenum, it is entirely comprised of the totality of all Monads, ie. the Monadic Collective. This external source of information is then investigated, engaged and recruited by the MSM. The DNA molecule is engineered and evolution within the Dimensional Realm has started. The first changes would have been evolutionary, slow and gradual change over time.

Eventually, after a couple of billion years, complex cell bodies have evolved, initially powered by the energy/information coming from the MSM. Susequently, energy sources within the Dimensional Realm are recruited to enhance cellular activity, because dimensional forces are quite different and 'stronger' than non dimensional forces. The incorporation of Mitochondria into the eukaryotic cell was a 'threshold' moment... this enabled multi cellular organisms to manifest.

Within less than half a billion years, complex multicellular organisms appeared on the planet and this increased complexity of physical, dimensional, structure

Disclaimer

by Harry Weinberg B.Sc. Human Biology, Oxford.

This work is a product of my mind. A condensed version of all the concordant information and worldly experience I have been fortunate and unfortunate enough to perceive during my life to date.

It is certainly not intended to offend anyone. I write to stimulate new thoughts and new considerations within your own mind. I write to make you stop, reread, and give further consideration to the text. To enable you to reconsider and potentially challenge accepted and adopted information, and the conventional 'wisdom' and dogma that your mind has been subjected to.

(When I reread this, it reminds me of trying to work my way through sociology books when I first attended university. I urge you to aspire and wade through this mire of text and apologise for not being able to render these opening paragraphs in a more simple form. I am aware that we all have different vocabularies, I aspire to make it as easy to comprehend as I can).

I have no intention to create the impression in anyone's mind that I want to negatively criticise their own mind, their own race, religion or belief systems. I have no desire or intention to put someone down and hurt their feelings. That is most true.

I know my agenda, I am fully aware of it...I gain nothing from supposing and wanting to believe that I am more clever than you are. I know better, and it is not my intention to create the impression that I am right and you are wrong. I mean that most sincerely. That previous sentence is a statement of absolute truth... As are the two paragraphs above this one.

Attempting to understand Mind and Life for what they are, should take one beyond the realm of petty bickering and disagreement. Beyond the superficial realm of existence that is becoming dominant in the world I see around me today, you can choose to enter the

intriguing, curious, spiritual, mystical and rational realm of Soul and Mind and the manifestations and emanations thereof. You can also choose to stop reading now...

Pre Introduction.

I consider that I have a deep understanding of why we are all what we are.

We are human beings, a physical body at the effect of its genetics interacting with the surrounding environment. Our mind stores information in the form of memory, those memories affect how we process information and our consequent behaviours, attitudes, considerations and beliefs.

Our mind processes information according to our genetic 'makeup' and its environmental 'makeover'. Our decision making process proceeds accordingly. Decision making is a mental process.

This work attempts to explain how our mind processes information and why it processes it in the manner it does. It will not fully explain why we are what we are, however, this work should facilitate your understanding and enhance the clarity of your mental perspective. A lot of what I write can be considered as conjecture for further consideration and discussion.

Long live the open mind with its predisposition for 'free will' and its expression...

Whatever 'free will' means to you now may well change if you manage to reach the end of this work. I do not attempt to define it. It is easier to understand what is meant by the term, than to attempt to define it. The more closed an individual's mind, the less 'free will' is able to express itself.

A closed mind, by my own definition, does not accept criticism of any kind. The mind becomes set, rather like jelly but can be like concrete. Changing mindset often requires metaphorical machine tools, sometimes it will happen as a result of personal trauma of one

kind or another. One's mindset can misconstrue 'criticism'. That is to say it can reinterpret the true intention of the informant and produce an incorrect understanding in the conscious mind of the individual receiving the information. They then can feel challenged and put down. Negative feelings arise within their Self and they can get angry etc etc.. quite likely, not the intention of the informant.

Criticism can be constructive, destructive or neutral. It depends on how information is given and how it is received, perceived and understood by the mind of the individual. Constructive criticism can be deemed destructive criticism, it's all a state/position of mind and perspective...

The same statement given or spoken to two people could be regarded by one of them as positive criticism whilst the other person considers/feels it to be negative criticism.

The absolute fundamental truth is that, it is just information, delivered either in written or verbal form by one individual to two others.

The mind of the person giving the information has both conscious and unconscious agendas. The delivery of the information may contain either conscious or unconscious threads coming from those agendas.

The mind of the person receiving the information also has both conscious and unconscious agendas that will affect the interpretation and understanding of the meaning of the information/statement conveyed. They can misconstrue the inherent meaning and intention intended.

Misunderstandings can occur even with the most simple of statements or questions.

If you can understand this, then you can understand how conflict can easily arise between individuals or groups of individuals,

communities, their families, their friends, their football teams, their countries and also within their own brain, their own mind and their life itself... If the information is intentionally delivered to cause conflict then fighting, strife, and war can ensue. If information delivered is intended to be constructive and supportive it can still cause conflict due to misunderstanding.....

This is an important message and a point to be seriously considered by the reader at this point in time. **If you cannot understand the paragraphs indented above, then do not continue to lose your time reading this work**

The absolute fundamental truth is that, it is just information, what you make of it is of your own volition. *If you think I am responsible for your own volition then stop reading.!!*

You will get confused and angry, you will get upset and want to shout at me and tell me that I am wrong and that I do not understand anything. You'll want to point the finger at someone else. Instead of taking responsibly for your own life, you will want to blame others. A more evolved understanding rarely assigns blame to any single individual. Life is too complex for such a simple solution to our ills to be true. I learnt long ago not to point the finger, I have studied some psychology, I know that displacing responsibility is denial and counterproductive to one's future wellbeing. However.....

This is people, this is life... Still want to continue??

I have spent most of my 65 years to date, trying to understand how it all fits together, I made mistakes, I hopefully corrected them and continued to absorb information from as many sources as my journey through life presented to me.

I write to share information, the intention is totally positive... and possibly selfish because... If I am going to reincarnate, I want to return to a world where all people can be, by default, healthy, happy

enough, and know and have Love in their life. I know that that is what most people today desire, I want it to be present at birth, present at conception and an environmental certainty.

Yes, that is idealistic, and it is not irrational, and remember, I am a rational idealist. We can create our future, our minds have to become harmonically aligned. It is not my future, it is our future. I regard this work as a part of the fine tuning mechanism required to enable 'the music of the spheres' to harmonically manifest.

Herein is my message to the world....

Addendum

And I regard this work, (despite the fact that I was taught at school to never start a sentence with the word 'And', let alone a paragraph), I regard the work to be viewed as I did the film with Bruce Willis in it, 'Sixth Sense'. It parallels how our mind operates and how, what and why we perceive what we do. It demonstrates levels of understanding that are usually not apparent to our own minds. I watched it once and I understood the message when it was made apparent at the end of the film.... I watched it again and the clues to that original understanding were so many. Despite the information I perceived entering my mind, I processed that information according to my cognitive abilities and level of mental processing. Levels of mental processing have associated levels of understanding. The second time I saw the film it was almost a different film. If I watched it a third time maybe something similar would occur.

Maybe that is why people watch films more than once. Personally I prefer to read a book, nonfiction by choice, I would expect to learn more from a book than a film. You are free to reread this work at your discretion. Maybe the second time will produce a different response to the first...

There is a lot of stuff to be digested, some things take longer to digest than others. Don't eat a heavy meal before a marathon run.

Don't attempt a marathon run without training and preparation. Learn the basics before attempting Olympic records. We are all athletes on the track of Life. For me, winning is losing and losing is winning. It's a state of mind. My intention is that the wealth of information in this work can provide a wealth of healthy understanding that will enable you to run that marathon, to live your life more fulfilled, with a greater understanding producing enhanced enjoyment of the wonders within your experience of reality as it presents itself to you on a daily basis.

And by the way, an example of how words can manipulate our consciousness and its considerations.....

As stated above, I have an Honours Degree, it is from Oxford, it is from a University in Oxford, impressed.? It is from Oxford Brooks University... Not a part of The Oxford University...Less impressed? To be even more accurate and informative, when I attended what is now called Oxford Brookes University it was called Oxford Polytechnic...

However, in an attempt to 'big myself up' in a light hearted and unserious manner, I remind you that that bloke who produced the conflicting Theories of Relativity and Quantum Mechanics went to a Federal Polytechnic School, and according to Wikipedia was born in Germany but was 'Stateless' from 1896 to 1901 whilst at Polytechnic. He was working at the Swiss Patent Office (not a scientific institution in its own right) whilst developing his own personal theories that challenged the scientific paradigm of that time. Einstein was a Maverick . This much before becoming labelled as Genius. I am no genius by any definition, (except [Booking.com](https://www.booking.com)) and depending on differing accredited definitions, he may not have been...

My personal understanding of 'genius' would demonstrate productive output from teenage years onwards...however, I digress.. He disproved Newton on most all accounts, his works were used to promote the paradigm of physical, materialistic, empirical science.

His later life wisdom is little published. Fortunately, quantum mechanics and its spin offs are now forcing this physical, materialistic, empirical model to be revised... A paradigm shift is in progress...

Read on and enter the realm of mind, I disclaim responsibility for how you process the information and what happens to you in your future... You are the controller of your own destiny, I am the controller of mine. I am a manifestation of my Mind, what are you? One thing is for sure.. You are not a manifestation of my Mind, I have probably never met you and if I did, I have probably forgotten. Sorry. ('Sad but True').

However, it is written (and mathematically proven in a single 'simple' equation), that everything in the universe is a manifestation of all the Souls that themselves, constitute the singularity that manifested the Big Bang.

That equation originating from Euler, who allegedly, according to a Symposium of Mathematicians in 1999 asked to present what they considered to be the greatest formula to date, produced a result that had 3 of Euler's formulas in the top 4. Quite a dude... Catherine the Great had him in her Court. No wonder the Russians have advanced mathematical prowess. Euler is regarded as one of, if not the greatest, of all mathematicians to date. He followed on from the mathematical works produced by the genius, Leibnitz.

Gottffied Leibnitz's theory of Monadic Souls was one of the cornerstones than enabled my conceptualisation of Mindism to manifest. Vickor Schauberger was another. Read on and you will probably understand and know why.....

Understanding Reality as we Perceive It

Simple maths is not scary, it is easy to understand if it is explained properly. It is the language of the universe, its alphabet is not ABC etc, but 123 etc....

Simple maths uses simple numbers... It's just that we have had it presented to us with complex and ambiguous wording and symbols, and that is what has made it so difficult for us all to comprehend... Combine that with the limitations of the educational system as it exists today and it is the number one subject of distasteful avoidance.

Now it's time for a change....

We are told that we live in a three dimensional world. These three dimensions are represented by the x, y and z axis that we use on graphs. These three directional lines also represent the concepts of north, south, east and west. North, west east and south are relative concepts. Magnetic north is not true north relative to the tilted axis of the planet, it can get confusing if not demonstrated in a way that each individual mind can understand. And different minds understand in different ways...something that educational systems tend to ignore....

Some animals have physical sensory apparatus that enables them to use magnetic information to calculate relative directions and they can follow these 'lines' in their migratory paths and patterns. Maybe we have some sensory apparatus too but we are not taught to use it and so it becomes dysfunctional and atrophies...I digress

The three directional lines of the x, y and z axis emanate from Zero in two opposite directions and are also at right angles to each other. Another term we can use to define them is 'vector'.....a line with direction and length, it is a mathematical term and is easy to understand, no?

A vector can 'point' in any direction from its point of origin. Joint these two points and you have a straight line. If you perceive a circle with your imagination, then the vector/line from the centre to the circumference is called the radius. A circle, by definition is two dimensional. It is when perceived with the imagination. When it is drawn on a piece of paper it actually has depth, (the third dimension represented by the z axis). However, this depth is fractionally small. It is the thickness of the ink or material used to draw circle.

It is fractionally small to our eyes, but our eyes are far from perfect, they cannot see the microscopic world without using extra lenses to magnify the images. This is a limitation of our eye and the sense of vision that we have as humans. It means that we cannot directly see life processes. Single cells can be the thickness of the ink or material used to draw circles...and within them the process of life is whirring away at super fast speeds. We cannot directly see this. We are blind to the actual reality of life processes. We only perceive macroscopic images, we can see that something has grown but we cannot see the actual growth as it occurs in real time. This is important to understand, albeit pretty obvious when it is presented to our mind for consideration.

Our vision is very limited and we have to bear that in mind. I digress.

For the sake of convenience and understanding, our perceived circle is two dimensional and all vectors/radii fill the 360 degrees of the circle. There are 360 of them as defined by 'degrees', there are 360×60 of them if defined by 'minutes' and $360 \times 60 \times 60$ if defined by 'seconds'. This circle is on a flat plane. It's area can be calculated.

If a circle is drawn on a piece of paper and then cut out, and then it's diameter (a line through the middle) is stuck to a perpendicular rod, it can then be turned sideways... If it is turned 90 degrees then you will only see the edge of the paper, (half of the circumference of the circle). If it is turned 180 degrees then you will see all of the back side of the paper, turn it another 90 degrees and you will see the

other half of the circumference. Another 90 degrees and you have returned to the starting point. This 360 degree turn can also be divided into minutes and seconds. (In truth it can be further subdivided but let's keep it simple and not go there yet).

On the two dimensional plane of the circle there are $360 \times 60 \times 60$ minutes, ie 1,296,000 vector minutes. By turning the two dimensional plane we create the concept of the third dimension. This 360 degree turning circle also has 1,296,000 vector minute positions. Now try to visualise how many vector minutes there are in the sphere, (ie a circular ball shape).

This is the extent of my mathematical prowess. I think the answer is $1,296,000 \times 1,296,000$ which equals 1,679,616,000,000 minutes For sure it is a really big number..... For convenience and fun, I will refer to it as the "Minute" number...pronounced as if the word relates to size and not time. Maybe I should call it 'Mynute' number...more appropriate.

This concept is important to keep in mind when considering Mindism and Leibnitz's theory of Monads because each monad is generating at least this Mynute number of frequencies at light speed. (Maybe in the future I shall rename this work Myndism, that is an afterthought, as I write this as one of my last entries to Part 1).

By combining the hyper concept of the Monad with Euler's formula defining the unit circle, you can visualise a point with this Mynute number of circles, (ie circular vectors) all emanating central zero point. Each vector circle representing a waveform frequency. You are now visualise a Monad in action, perpetual motion..

And, there is an infinite number of monads, the Zero Point Field is a conventional scientific term, visualise a field of zero points extending in all directions of the physical plane, filling the Universe. Then consider that each zero point represents a Monad and that each monad is generating wave form frequency energy/information in all directions, continuously never ending.

A simplified version of this plenum of Monadic Souls is The Flower of Life, the centre of each 'flower' representing a monad....

The True representation is the Structural Form that manifests what we refer to Existence.

Reality is a structure that Mind creates that we hang/superimpose on this form. What we see outside our body is a mental construct, a projection, something that can be measured very accurately.

Ultimately it is not the full picture, our senses and the mental processing of that information is self limiting. To expand upon and 'see' more of the full picture we have to develop our rational faculties. That should be one of the aims of 'the educational system' that has, to date, failed most all of us...

I digress.

Each monad is conceptually individual relative to each other but identical in essence.

This corresponds to the individually separate physical body and its connection to an underlying non dimensional collective consciousness.

The dimensional realm is actually contained within the non dimensional realm that manifested it. This is a hyper concept that is taking me years to 'get my head around'.....

Dimensional reality is represented and can be defined by numbers from 1, to, infinity minus 1, it exists between zero and infinity.

Zero and infinity represent and define the non dimensional realm.

Zero is the 'centre' of the monad and infinity its 'edge'. In truth they are interconnected because each circular vector emanating from the centre of the monad has a corresponding circular vector 'mirroring' it. Each circle has its own edge, therefore defining the outer edge of this image becomes a relative consideration and the question arises, is there an outermost edge?

That question and its philosophical implications is not for consideration in Part 1 of this work. Just stay with, zero and infinity

defining the non dimensional realm and dimensionalism represented by whole numbers.

Remember, these are not my ideas or hypotheses, I am amalgamating and correlating them to the scientific theories of today and incorporating the speculations and pronouncements of some of the greatest minds documented to date. Who knows how many great minds had documented their ideas only for their works to have been lost or destroyed for whatever reasons the past deemed so...

Leibnitz's Monads.

These should be considered to be the building blocks of reality, not just as we perceive it but as it is within itself. This is a matter for deep consideration. It ties together Platonic and Pythagorean philosophy and enables a most rational explanation for most, if not all we perceive, experience and understand with regard to the information presented to our minds today. Ie, science, maths, philosophy and religion.

Deep? You can't go deeper than as Leibnitz termed, First Causes or Existants.....(except that depth is a dimensional concept and monads, being outside SpaceTime do not conform to dimension considerations.....and at the same time, As Above, So Below). It could be considered, discussed or argued that, being a concept, it is mental and so it has a mental reality: however, some mental phenomenon are based on physical data, so uncertainty arises and it can get confusing. I digress.

Our senses have evolved to collect information from the physical dimensional realm to enable our survival and subsequently, for some of us humans fortunate enough, enhance the quality of life. Each sensory system is limited to the information that its specialised receptors have evolved to collect. Most sensory input is relayed to the brain and from there it is relayed to the mind. All sensory input is relayed to the mind. All cells contain a full

complement of the DNA specific to the organism. They all send information from the cell body and receive information from the MonadicSoulMind. The DNA bases send the information through the zero point field to the mind. The mind responds and sends back energy/information. It is this energy/information that feeds cell the 'Life energy' that sustains its existence. Molecular (dimensional) structures are used to maintain the physical body of the cell and hence the organism, this mechanism to sustain the physical integrity of the cell and its organelles is also controlled and directed by Mind with its inherent intelligence.

However, maybe you consider that a molecular structure has inherent intelligence and that that intelligence is separate from the intelligence of your mind. Or maybe you think that your mind is a product of that molecular/atomic intelligence. If so, stop reading and go watch a movie or do Facebook or something...otherwise you might have to change your mind. And that means challenging and undoing a whole mass of learnt and programmed behaviours that make you the person you are today... A tough shout for most folk, it is easier to stay where you are than journey into the Unforgiving. Alternatively, your mind might just change you....

"the Truth is not for everyone".personally I reject that quote because I am a Rational Idealist, however, it is unfortunately most appropriate for this day and age...

Let's bring on a new age.... The Age of Clarity..... It's idealistic, it's rationally feasible, it's the essence of Mindism....

Aspects of Mind enabling aspects of Mind to perceive themselves... The vision of the eye is limited to its information spectrum and can only look in one direction at a time.

The vision of the Mind's Eye is all encompassing and can see in all directions at once, being outside Spacetime. But does it see in all directions at once...? Or is there some limiting (mathematical) factor frustrating its intentions?

The journey of the soul can be said to be the path it follows to regain 'all directional' vision. For within the Mind one could say that 'Seeing is Knowing' and when all is Known, the Soul has completed its journey, destination..... Fully Illuminated Enlightenment... The human form is part of that journey. Know Thyself..... Onwards and Inwards.....To Infinity and beyond..... or should that read? Onwards and Inwards.... To Infinity and back to the beginning.....

Read on.....

Chapter 1 part 2 Mind, understanding and anthropocentrism...

Mind is an intelligent entity, its existence coordinates the information exchange between a Soul and the physical body it is connected with. We need a more refined vocabulary to better understand it. We need to think a little bit more about it and contemplate its existence, not just the individual mind as we experience our 'own', but also the concept of 'the collective mind'. Or is the 'collective consciousness'? A conventionally accepted definition of 'consciousness' is necessary if we are to discuss and truly understand what it is we are referring to.

Considering it in more detail will enable us to better define it... At present we are informed of the existence of individual mind, we experience it subjectively and are quite certain of our own existence in this physical world. Beyond that we have been at the effect of the education system and cultural belief systems that direct how our mind processes information and consequently limits our understanding accordingly.

The Jungian concept of the collective consciousness is some form of representation of Leibnitz's Monadic collective.

To try to intuit some type of structural form to the realm of mind, ie the non dimensional realm, I use the definition of the zero point field as the interface between dimensional and non dimensional existence. The zero point field is a conventionally accepted scientific reality.

Dimensional structure has corresponding non dimensional form. This statement is to be remembered for all consideration of the mind/matter duality. It enables one to understand the difference between individuals of the same species.

The more philosophical aspect of the manifestation and interaction between the realms of mind and matter provides an understanding of the difference between all things...

Minds process information, they communicate and share information, human minds have developed a complex form of communication that also enables information to be sent over long distances without a word being spoken and not a sound being made. Of course words are just sounds that humans recognise and, assuming they have learnt the language (symbolism), the mind makes sense of these sounds and images [letters/characters] by assigning meaning to them. That means that the mind has matched repeated patterns of sensory input, visual and auditory, and by also involving 'memory' it builds an interpretation and understanding of the information that is being conveyed between one individual and another. It is a process, when examined closely, that is so very complex and one that has developed over an immense amount of time. One billion years ago there were only single cell organisms living on this planet, since then amazing things have happened, the continuing emergence of variation and different forms of life on this planet until more recently that is. Now humans are responsible for the demise of species at a truly devastating rate.

We will look more closely at this variation of structure and form and see how the incredible complexity we see today, when deconstructed, reveals a most easy to understand, step by step process of evolution (change). Certain points in time become more significant as they mark the arrival on the planet of a far more efficient cell that enables subsequent generations to manifest a greater display of diversity within the species.... (eg the arrival of the eukaryotic cell or the muscle cells of the heart). To understand the complex multicellular organisms living on this planet today, including humans, we have to look into the cellular level, this enables us to then understand diversification and the complexity it can manifest.

Other than humans, all other animals seem to have an innate understanding of the meaning of sounds generated by members of

the same species. How do they do that? Where is the inherent ability to do this and what is the mechanism?

Conventional science will say that the intelligence processing this information is inherent in the molecules and atoms that make up the DNA of animals...they cannot suggest any mechanism that explains how this process occurs....

"They" say that mind is inherent in the nerve cells (neurons) but that does not explain how organisms without nerve cells display significant intelligence...and the neurons in your spine and body in general are fundamentally the same structure as the neurons in the brain, which should suggest that my mind is not just in my head as they would want us to believe...

Minds process information, they make decisions, they effect actions and movements within the organism, In order to understand it is necessary for the mind to have processed and stored a phenomenal amount of information. Mind accesses this stored information and it can also refer to the store of information as 'memory' mind uses memory to calculate potential outcomes...when certain outcomes are considered predictable then habits and programmed responses arise...nature is most energy efficient. Saving energy saves time. Time recruits energy and energy is not to be wasted. At least that is the theory...energy is non dimensional, time is dimensional and minds can and do make mistakes... Using the term 'mistake' may be a mistake...from a human perspective and definition, mistakes are regarded as negative and emotional terms such as wrong or bad are used to reinforce the meaning of the word. Emotional content of words is not the domain of this work, but it should be born in mind that it is a mental certainty and is used to manipulate, program and affect us accordingly. For sure, most of learn through our mistakes.

Anthropocentrism

Anthropocentrism is the [human] act of assigning human qualities to anything that isn't human (eg "that dog looks like Einstein" or

"There's a face in a piece of wood") it is also about the notion that humans are the ultimate form of evolution and are so very different from other creatures...this is a very old fashioned understanding that has somehow maintained its position ((prevailed) despite science constantly rolling out more and more detailed and precise information about the plant and animal kingdom and the continuity of life processes throughout all living organisms....

Anthropocentrism results from the old fashioned beliefs that there is a creator God and man was made in his image....I met a blind man who was working on his Ph.D, it was about Anti-anthropocentrism..... Do you have to be blind to see what should be so obvious.....?

I thought he was a smart guy, and not just because he was able to comprehend the theme of this work quicker than anyone else I have shared it with.

I have run these theories past quite a few educated people and some not so well educated. You won't want to know about or want to understand this work if you have subconscious agendas that are challenged by the inherent overlying theme.

An aspect of the mind prevents accepting and understanding in an attempt to maintain the individuals 'world view'. We say that their mind is closed...we simplify to delude ourselves. Is the mind so simple that it can either be open or closed? Of course not, it's quite the opposite that is true. However, our Subconscious Self is a gatekeeper designed to protect itself and its own agenda and transient existence from 'harmful' information. Possibly, our subconscious self is in fact a collective of 'selves' that have manifested as a result of programming/learning at a very early age.

Fortunately the more open and unrestricted intelligent minds accept the information I present to them and do not find it discordant in any way other than that it is relatively unconventional and it is new to them.....they do get feelings of concordance and interest in the subject matter and many look forward to the

completion of this work and its release into the realm of cyberspace and beyond.

Leibnitz's term Monad is most helpful in developing an understanding of Mind and self. In his unofficial 'Principal of Monadology' he relates the Monad to the Soul. As I understand it to be, the Monadic Soul is the receptacle that manifests Mind and that it is Mind, not species that is evolving and that, ultimately, species, all living organisms, are a manifestation or expression of the Monadic Soul and its evolving Mind. (As a rational idealist, it is correct to state that all matter and the dimensional realm of existence that our senses have learned to perceive is ultimately a manifestation or expression of the non dimensional realm) As the Mind evolves, its inherent intelligence evolves accordingly. How separate the two concepts of intelligence and mind are, is something to focus study on. What is for sure is that species do not evolve. Evolution is a concept of slow and constant change, the definition of 'species' is that the organism can only reproduce with other organisms with the same genetic complement. If similar species could interbreed eg gorilla, chimpanzee and orangutan, that would substantiate a concept of evolution of species... But they don't...species don't evolve, mind evolves and the production of a new species is a genetic 'leap' of significant change in the DNA complement that manifests the new organism accordingly.

Mind, and Matter, and Cartesian Dualism, [named after Descartes of "I think, therefore I am", fame]What do we know about them? Matter is physical. It manifests the world of 'solid' objects, planets, clouds, trees, everything animal, vegetable and mineral. All matter on this planet is a combination of electrons, neutrons and protons. The smallest units of solid mass that we can measure.. Matter is not only objects and things that we can see, there are also many objects that we can't see. During the past few hundred years technology has

developed more and more sophisticated machinery that can see smaller and smaller objects.

In the past seeing was believing, now we know that that form of belief is delusional and the eyes can be mistaken as well as being tricked. We know something is there even though we cannot see it with our eyes...How do we know it is there? Because our mind has accumulated sufficient information to recognise and understand that it is not only reasonable and sensible to accept its existence, it would be ignorant and wrong to deny its existence. That is what rationale and rational thinking is. We can trust some of the technology and machinery that has been developed to produce 100% repeatable accurate information.

The Eye

We learn about optical illusions and how the information that the eyes send to the brain is constantly being updated by the nanosecond. Consider hand/eye coordination.....an object is thrown towards you and you have to catch it. According to Newtonian convention, scientific empirical materialism, the information is processed somewhere within the molecular structure of eye and brain. A location as of yet unknown, and the inherent intelligence manifests as some form of mind within the SpaceTime dimensional realm of physical matter....Where is this information being processed? Each eye sends one billion messages per second to the brain through a sequence of neurons... Which neurons are doing what work? Can each neuron process all the information it receives and make 'decisions' and then forward that decision to the next neuron....? How does the next neuron 'know' that it does not have to process the information it receives and instead pass the message on to the next cell? WHERE is all this information processed within the dimensional structure of the cell? How do these neurons amalgamate their results and produce an image that we 'see' apparently, somewhere in our brain, but believe it to be outside our

body... ie. the external world we perceive as reality.. Rationally of course it outside the body....our body occupies physical space and we navigate the physical realm using mainly information from our eyes to inform us of what is going on out there and where it is 'safe' to go next. Fourier, a mathematician in the early 19th century presented us with the Fourier Transform.... There is also the Inverse Transform....the formula is the process of converting information from a dimensional to a non dimensional format... The inverse transform converts it back again...

When a voice speaks into a microphone, dimensional sound waves cause a diaphragm to vibrate and these varying vibrations are processed and transformed into waveform information which travels along the wire to the processor in the loudspeaker that converts to waveform information back onto dimensional information that vibrates the loudspeaker and not only can we hear what was said we can now have some control of the information and can, for example, amplify the frequencies which we perceive as an increase in volume.

As I understand, Fourier Transforms also mathematically explain what happens to the passage of information from the physical realm of molecular DNA to the mental realm of Mind.

According to Plato, Pythagorus and Liebnitz, Mind exists in a separate realm which can now be mathematically proven to have existence. Yes, the image of the world we see beyond our eyes is some form of mental construct and there is far more out there that we humans cannot see than we can see. Rationally we know this to be an Absolute Truth, although many minds would rather deny this fact.

Newton took Mind out of the mind and matter duality, it fitted in with his system of measurement, which is, in the physical realm of matter, quite precise. However, along came Einstein (and others, of course) and suddenly Plato's consideration of a mental realm, separate from the physical material world became a more realistic

and rational consideration. That there are mystery schools in existence for thousands of years that have always had this knowledge is not to be ignored.

Leibnitz, who lived at the same time as Newton, amongst other things, focused on the realm of seriously small things... He invented Calculus, a most incredible mathematical tool. He considered infinitesimals and as I have progressed with this work over the past couple of decades I have also focused on smaller and smaller existants. This is almost a totally necessary procedure in order to visualise and understand the building blocks of Life and the Universe....

It makes sense. To know how something works we take it apart and examine the individual parts ... Then we take the individual part and see how that has been constructed and so on until we have come down to the smallest possible units.

Taking something apart does not necessarily tell us how it works but it does give us an idea and is food for thought, information to be considered and theories developed to either be correct or not....It is not rational to just accept that reducing a component to its sub components and so on, continues as an infinite regression.

Conventional science does not explain how understanding and knowing occur at the atomic level.... But to most people there is an intuitive knowing that they have a mind of their own and that it does the processing of information, the thinking and the storage of the information. They know they have a memory and can access it according to their own intent. They have been told that their mind is in their head and because (probably) most information going to the mind is via the brain, it is not unreasonable to consider, or just accept, that mind is located within the skull. However, apply reason and rationale to the logic and a different picture develops...I define Conscious Self as an aspect of Self, apparently located in the head and it exists in realtime... ie. it is the aspect of Self that is here and now... Self is more complex than just this aspect of existing in the

here and now of realtime. Conscious Self, on the other hand, as a mental projection dealing with dimensional here and now, enables Ego to manifest...(be aware that Freud and Jung had different definitions of Ego, the word should be used with this in mind... Ego, as I understand it, dies along with the physical body, it is a term used to try to explain an aspect of mind. All aspects of mind are non dimensional . Ego manifests from within Conscious Self and interacts with the subconscious to try to control our thoughts and actions to suit its own agendas.

If mind is inherent within the neuron then only organisms with nerve cells will have a mind....

And so we have to try to define mind..... Defining words is most important because it gives us a conventionally accepted common meaning to the word (sound) ... That facilitates understanding. We know how difficult it can be to communicate with people who speak a different language....so.... Knowing the meaning of words enables us to communicate more effectively and the more words we know, the more precise we can be with our descriptions and the more efficient our communications....our awareness and understanding of existence grows with our vocabulary and ability to consider, deduce discuss and explain. We accept by convention what a centimetre is...It is irrational to challenge that statement and the necessity for precise definition in general.

Nature loves efficiency. Nature is an example of ultimate efficiency...Nature is a manifestation of Life. Energy is conserved in living systems wherever possible. Survival is paramount it seems... At this stage of Life and evolution do not expect to find all the answers herein. These are modern times with old fashioned ideas prevailing despite the mass of information demonstrating that we need to have a clean sweep, a new broom to clear away the ignorance, misinformation and assumptions of the past... Some

traditions have value in these modern times, many don't and hold back Mind (and humanity) in its journey towards its omega point. By the end of this work you will at least be considering that much of it is not to be scorned at...and you will be opening your own mind to new levels of Understanding based on your own considerations and occasional moments of intuition.

Me and My Considerations

"The Journey of the Soul is the Evolution of Understanding".
(Anonymous)

A quick biology lesson with a bit of maths and, who, what and why I Am:

Hello, my name is Harry Weinberg and this work is a representation of the combination of my physical experiences with the mental processing of those experiences of my life to date. It is my worldview and understanding. As my life continues, I expect my learning and understanding to continue and modulate my life accordingly. This work is as objective as possible, the only subjective agenda is to share knowledge and information with the Intention to enhance the wellbeing of all things on this planet and beyond.

It is free, knowledge should be free. By free, I mean that no financial gain is intended in dispelling the information. If you are impressed enough by the content, then at the end you can make a small donation to the future. When I sold wood products I paid for trees to be planted in Thailand where I sourced my wood products. Now I am retired, in Thailand, a wonderful country where life is in abundance all around me. (I don't live in a city). I am not wealthy, I never aspired to accumulate wealth. My father was a sociologist, socialist at heart. I don't want donations of more than £5. One pound is enough, for some people £5 is a lot of money. With age, I have become meritocratic at heart and planting trees is a heartfelt yearning within me. Half of all donations will be spent on tree planting. Less than twenty years ago, I read something written in 1933, if we don't plant billions of trees then our climate will change dramatically. (Schauberger, world genius). He predicted climatic changes for the worse, if his advice was ignored, they have

manifested. It was then the obvious answer for me as how to reduce carbon levels, plant trees, they are carbon based life forms (as we are too). Recently a bunch of Swiss scientists published the results of their research, plant a billion trees to reduce the carbon footprint to a sustainable level...

Plant billions, there are beetles that have reproduced to biblical proportions in North America that have destroyed more than a billion trees on their own, a result of slight temperature increase enabling them to survive the winter that previously killed the adults. If you aren't going to plant trees then give me £1 and I will pay people to do this, 'save the world, save a pound....give it to me'. I will publish my actions and my bank account will be transparent to all. That's the kind of guy I am.

My body, like every human being is, in simple terms, is a physical life supporting apparatus which incorporates muscle, internal organs, the blood circulatory system and the skin holding it all in place. It is coupled to a brain that monitors and controls all the working parts via a network of extensions called nerves (neurons) and the production of hormones, some hormones are produced elsewhere in the body.

Specialised receptors at the end of many of these neurons collect information from both the world external to my body and also the inner workings of the body itself. We are familiar with our senses, sight, sound, touch etc and the information that is relayed to the brain via these sensory pathways. Most of us are less familiar with but sort of know one way or another that data is also being relayed to the brain that is used to control and maintain the most efficient levels of homeostasis. (The life processes occurring within and between all the 100 trillion plus, cells of the body). Blood flow, heart rate and blood pressure and constantly monitored, as is temperature and water content levels within the cells and also in between them. Balance and controls of oxygen levels as well as

levels of various nutrients are constantly monitored, in real time. Feedback systems such as the one that produces markers in our salivary fluid that attach to specific molecular food products that ensure that, when absorbed into the blood by the digestion process, they reach their intended destination cells, where they are required. The markers are produced by the destination cells and are collected by the salivary glands.

Countless similar processes are occurring moment by moment within this biological virtual miracle of existence. Billenia, well more than two billion years has passed since the appearance of life on this planet and the evolutionary development of these processes, at first very slowly for the first billion years and then somewhat faster during the second billenia. The past few hundred million years have seen an accelerated evolutionary development. The manifestation of the first fully working single cells that we are familiar with today are bio quantum computers in their own right. They had and still have, free floating DNA within their cell bodies, they are bacteria and algae such as Spirulina still existing to this day unchanged by almost one and a half billion years. They are prokaryotic cells.

The appearance of cells with their DNA encapsulate nucleus at the centre of the cell body came much later. (Eukaryotic cells). Locating the DNA in the centre enabled these cells to be much larger in size, it takes time for information from the DNA to reach the various parts of the cell, locating it in the centre was a good idea. Amoeba are examples of eukaryotic cells and they display phenomenal levels of intelligence and communication between individual cells over a distance. They even farm bacteria, smart stuff.

Our brain and body is a combination of the most efficiently evolved and developed cells all working together in real time to sustain our life processes and try to ensure our wellbeing. It should be considered that the control of all of this is outside the single cells and the brain/body complex they manifest. We have been presented

with the term 'mind' to explain our awareness and consciousness of the thoughts, memories and experienced reality that manifest from the interrelationship between brain/body and mind. It has evolved with time to be what it is today.

The main intention of this work is to present a rational and reasonable explanation of what Life is and how it appeared and developed on this planet and the involvement of 'Mind' in the manifestation of life as we know and understand it.

I use the term rational. I define it here....whether the reader is an empirical materialist (conventional scientist) who considers that mind emanates from physical matter, a rational idealist who considers the Platonic, Pythagorean, Leibnitzian view that matter is an emanation of mind, or whether (like most people), one is uncertain about these matters and just interested to understand more about life, what it is and where we came from, whatever one's point of viewing reality and attempting to comprehend it, rational should always trump irrational.

This is a 'work' not a dictionary, however it helps that we all have a similar definition and understanding of the words we use, I will give some of my definitions which I think will concur with the conventional definitions out there.

Rational and rationale is the combination of logic and reason processed by the mind and its intellect. Intellect is the acquired mental skill of processing information that facilitates further understanding and comprehension. It develops from childhood and does not begin to fully mature until around the age of 42 at the end of the second 21 year cycle of mental development. Historically, one was not allowed to join mystical, magical schools until the age of 42 when the mind was able to begin to understand the concepts and stuff necessary to 'master the skills of the occult'. Merlin, it is written, became Merlin at the age of 42, prior to that he had a regular name, not the name of a proud animal, as with King Arthur,

whose occult name was, as I recall, some type of bear. (The 21 year cycle is also a composition of 7 year cycles). A process manifesting from the fundamental intelligence that developed within the Monadic Soul and its evolutionary journey. (Explained later) The intellect develops with accumulation of information from direct personal experience and information delivered to the mind from external sources, our environment, books, teachers, documentaries and other relatively accurate sources of information. (The less accurate the source of information the more sceptical one should be as to its origin and purpose). The intellect combines these two sources of information and if allowed to, develops along a dialectic path becoming more efficient at information processing with the passage of time. Intellect in 'develop countries' is very dependent on childhood development and formal education.

However the 'chicken and egg' dilemma could easily be solved by a hunter gatherer, previously defined as 'primitive'. By definition they are primitive but that does not mean they are ignorant savage beasts, (if such an animal actually exists), usually it is more the opposite, and the term should be regarded with respect and not derision.

Rationally one expects an infant to grow up into an adult to produce offspring, so the egg comes before the chicken. Nothing in physical existence that is perceived moves backwards in time. When I was young I was intrigued by this alleged dilemma. Once knowledge of evolution was acquired it was immediately apparent using logic that dinosaurs came from eggs, dinosaurs existed before chickens, therefore eggs came before chickens. A 'no-brainer'. Combining logic with information that is deemed by reason to be accurate, produces rational statements. Processing the information occurs in the mind regardless of whether you are rational idealist or empirical materialist. Only by denying the existence of mind can you deny that rational thinking is not a mental process. (Maybe better to stop reading now if that's the case, you'll only make yourself angry and upset) Evolutionary processes are, for the rational idealist, both

rational and a result of the Intention of Mind. They have a purpose and an end. Intention, Anticipation and Expectation are mental phenomena underwritten in mathematical codes, highly complex 'if-then' statements, interacting with feedback to produce sometimes simple and sometimes highly complex outcomes.

Rational statements not only 'make sense', they also contain information that are, at worst, contingently true and at best, absolutely true. Contingent, is relative to context, absolute, has a mathematical underpinning. Contingent truth is relative and dimensional, Absolute truth is mathematical and non dimensional. Empirical materialists deny the existence of the non dimensional realm, rational idealists know of its existence through rational thought processes. Denying the existence of anything is not clever, it limits the minds ability to comprehend and dialectically develop. I do not deny the existence of God, I provide a rational explanation to define the concept as you will read later if you can persevere and get through this mire of words and information they convey.

So this work is a book that presents, amongst other things, a realistic and rational explanation of Life, its origins and how it manifested from what existed before life appeared on this planet. I use conventional terms and conventionally accepted concepts like the zero point field. All scientific hypotheses and theories will have criticism and objections to them and often rightly so. The purpose of this work is to deliver information, provide an explanation that facilitates an overall understanding of 'all things out there' and how they all, at some level or another, are connected. Mind should be the key to understanding everything, including life, but at this point in this work, the reader does not have much of an idea of what mind is other than they have one, and depending on their educational path, that is probably that. Students of psychology will have a bit of an idea but they have to step back and consider that there is an agenda behind academic studies and that agenda has changed since I first went to university.

Even then it was suspect, but I did not know why.

One of the great influences in furthering my understanding of Mind was Viktor Schauberger, an immense genius of the 20th century. He told his parents in the late 1890's that he did not want to go to university because he could see how it had corrupted his elder brothers.... I certainly am not in his league.

This work should enable the reader to begin to develop an understanding of how Mind manifested and what it is. As I am still learning about it and its complexity this work is still at the beginning of the journey to fully comprehend the internal workings and various levels and manifestations of Mind and its existence in the non dimensional realm outside spacetime. Eminent scientist Professor Russel Targ clearly states that mind is non local. His Ted talk on ESP and remote viewing is worth the 20 minutes it takes to watch it. It will take greater minds than mine to complete this work.

The key to begin to understand this work is recognising the role of DNA in the process of Life and how we, as human life forms have come to 'know' and experience 'life'. So although previously stated that Mind is the key, for now I say that DNA is the key because it significantly enhanced communication between the non dimensional realm of waveform frequency information and the dimensional physical realm of matter. Prior to DNA, information/energy flowed through the zero point field either as the outflow of non dimensional energy, possibly ambiently, (for want of a more accurate term) and also induced by material molecular structures in the physical realm. Examples of such are crystals, different crystalline structure facilitates different electromagnetic frequencies entering the dimensional realm and are one source of zeropoint energy. Read Mark Comings work on electrical output increasing from coils wound around crystals, input was lower than output. The energy, in the form we call electricity, was drawn through the zero

point field via the crystalline structure, and the output recorded was significantly greater than the measured input. Tesla produced zeropoint energy, electricity without wires, as was demonstrated to a bunch of journalists in the early 1890's (in Colorado as I recall). He showed them his apparatus for generating electricity and they took them 50 miles away and lit up a light tube, cordless energy...where did it go?

Granite releases low levels of radiation, same process, crystalline structure facilitating a flow of energy from non dimensional to dimensional. Quartz' as most of us know, does this with amazing accurate time release...

However, non dimensional existence until the quantum age was deemed unknowable and was a purely philosophical matter (intended pun). Now it has to be seriously considered as an aspect of reality as we perceive and understand it, it is directly related to existence.

My ideas have developed over the past two decades bringing separate fields of knowledge closer together. Ultimately developing a Grand Unified Theory of existence (GUT, also an intended play on words, as this work will demonstrate in another chapter). It should explain all aspects of reality as experienced by the Human Mind. Any idea or consideration that does not fit into the theory either suggests that the Theory is incorrect or incomplete, or alternatively the idea itself is wrong. In truth it is a Grand Unifying Explanation", the GUE of existence.

One thing is for sure, I am no genius. My journey through life has, like most other people's, had various obstructions appearing en route. I was forced to be right handed at around 3 or 4 years old. Prior to that I was either left handed or ambidextrous. Who knows how this affected me, having one's brain rewired at any age must be disturbing on many levels. Maybe this experience gave me an

interest in Human Biology. My first year at university (Surrey), was when this intrigue with life processes, mind, brain, life and handedness started to develop. Most of the boys at my school went on to university, it was and still is a very good school.

My second year at university developed my interest in the 'fairer' sex. Boys schools can generate good academic qualities and qualifications but it teaches little about sharing the world with the opposite sex. Don't lose time and energy criticising my words, understanding is paramount, I am now 65 years old, don't have a go at me for sometimes acting my age. When I was 20 I thought I knew it all, and that 30 was old. When I was 30 I realised that at 20 I was wrong and that, at 30 I knew it all...and same at 40by 50 I knew better, by 60 I could begin to explain why...and I contemplated and considered this for a few years before putting it out there. I hate to be wrong. I don't approve of misinformation, it makes me feel bad. When I was 18 I felt with my hands, emotionally immature and more, now I can feel with my mind. (and sometimes with my hands too, if I am lucky 😊)

Consequently at the end of my second year of fun at university I dropped out and, as was the fashion, travelled East in search of knowledge. I read Gurdieff, Huxley, Solzynitzin, Orwell and many other books including Tibetan Secret Knowledge, (I still don't comprehend it)...The lyrics of Peter Hammill were an earlier unconscious influence on my life, had a go at the Koran and Hindu and Buddhist texts, already being familiar with the old and new testaments.

Then I unintentionally became a parent, which, as it happened, became a great learning experience for me, also, as a single parent some of my feminine aspects were activated.

Then I returned to higher education 12 years after dropping out and got an Upper Class Honours Degree, a B.Sc. in Human Biology at a college in Oxford after two years of study.

I never went up a class at school but whilst there, I did receive an upper class education.

Since then I have accumulated information, jumped to conclusions, errored more than I didn't, which eventually enabled me to state that, learning through mistakes is the reason why I have learnt so much...(so many mistakes etc..) In the words of my old maths teacher (who taught me no maths) "correct and continue"

Hawke-Genn was his name... He really did not teach me anything at the time. After one term in my new school at 13 years of age, I went down a class, then two school terms of copying maths answers from the kids sitting next to me...however.....

Correct and Continue. An awesome directive....the more I think about it, the more I wonder if it did not have some long term resonating effect in my subconscious.... I had learnt New Maths at my previous school from 11-13 years old and as my new school taught traditional maths, I could understand little despite having learned my times tables at an early age. As a child I used to go to sleep at night considering the combinations and relationships between numbers...learning is stifled without encouragement, wanting to learn helps immensely. I don't remember if I wanted to learn maths, however, the beginning of my fourth year at secondary school (knowing no maths at all) provided me with a teacher who could teach. Mr. Durrell, as I recall. He made the subject interesting, he explained and was not overbearing. Just over one year later I passed my GCE O level in maths with a grade 4.

Mathematics is the language of the universe and soon you will read a rational explanation of why this is so.. Don't be intimidated by mathematics....I don't understand a lot of the deeper intricate symbolism. My mind, like most people's, is not able to see how it all works.. All things, no matter how complex they are, are constructed of smaller less complex parts...and thus can be mentally deconstructed to their original individual components, however, if for example they have been physically 'welded' together, then

separation is at best, difficult and probably not feasible. (although not impossible.) This reduction from complex to less complex, from larger to smaller creates the concepts of good and bad infinity. Mr. Durrell explained it most simply by walking half way across the room. Then half that distance again. Then he halved it again and continued to divide by half so on, until he came to the wall. Good infinity states that after an infinite number of divisions a point will be reached that cannot be divided. Bad infinity states that there will always be another division. These two opposing statements can be understood and resolved, as explained later in the book. Good infinity defines by the reduction in measurement of size of a physical object, a point where measurement can no longer be made. The smallest possible point, the zero point. It is the zero point field that I have seen Professor Brian Cox explain on TV (back in the day, when I watched TV), as the source of physical matter and the Universe. The point when time began with the Big Bang and the creation of the Universe. An empirical materialist perspective that denies the existence of the non dimensional realm from which the energy that condensed to form physical matter originated from. Existence manifesting from non existence is irrational. Either the non dimensional realm transformed into the dimensional one or aspects of it produced the dimensional reality and other aspects continued to exist. Time is linear, space is measurable, two 'dimensional' lines can be measured, mathematically, they are vectors emanating from a zero point.

Picture a circle in your mind, the radius is a vector, (as I understand it), there are 360 degrees to a circle by convention. 360 radii. The degrees can be divided into minutes, 360×60 radii, the minutes divided into seconds, $360 \times 60 \times 60$ seconds. Defined by convention... And confusing, these seconds correspond to space and not time. They are radii. 1,296,000 radii seconds. In truth there are an infinite number of radii that fill the circle. This is on what is

defined as a two dimensional plane, a 'perfectly flat' surface. The area of the circle can be calculated.

Now consider that circle as a structure, and the diameter to be a rod supporting the structure. The circle will turn on its axis. It can turn 360 degrees and return to its original location in spacetime. The time taken to reach its original starting point depends on how fast it turns in dimensional space. It turns 360 x 60 minutes, its measured turning can be 1,296,000 radii seconds. Each radii second is a planar dimensional shift. A plane rotation. Another confusing conventional term. A plane...

A change of plane of the two dimensional circle by 1 radii second, a slight movement of the object changes the dimension from two to three.

Moving/turning the circle a full 360 degrees produces a sphere. A round ball shaped object. It is three dimensional by conventional decree. It had height, width and depth. Like the cube... Three dimensional measurements that enable volume to be calculated. This is not a maths lesson per se.. This is to demonstrate that rationally there are only 2 True dimensions to consider with regard to this work. Dimensional and non dimensional. Let that sink in.

The x, y and z axis of graphs are supposed to reinforce the impression in our Spiritmind that we live in a three dimensional world. In truth they represent up and down, side to side and forwards and backwards. They are directional with regard to dimensional existence and correspond to movement within that direction. Understanding develops within the conscious mind (conscious self) and its connection to a deeper, more unconscious level associated with our memory.

The cosmos is a dimensional concept comprising of the countless number of planets, stars and galaxies that are out there. The universe represents the true nature of existence as we humans perceive and attempt to define and understand it. It is, by its own definition, 'one verse', which should represent a totally harmonic

vibrational, interrelating and interconnected single existence. That is, as I understand it, the end point and purpose of the inter dimensional existence that manifested 'life as we know it' at some point in time in the dim past. The True Universe could be considered to be the Mind of God, the perfect symmetrical, harmonic, concordant Oneness of all Monadic Souls. This is not the world we live in... the Mind of God manifests from all the individual Monadic Souls achieving their own end purpose, ie. total enlightenment. Each one becoming a god in its own right. The journey of the Monad, the journey of the Soul, is from Ignorance to Godhead... When all Souls have achieved total Illumination, then the Mind of God is actualized, it manifests....We are some way yet from this happening. The Mind of God will be outside Spacetime, it cannot exist whilst the spacetime dimensional realm exists....total harmonic symmetry of the Monadic Collective is achieved at the 'expense' of dimensional existence returning to its non dimensional origin...and then the Mind of God, its all knowing realisation and understanding of everything will manifest another Big Bang, and, like the Phoenix rising from the ashes, so it goes on, another aoen, and so on...forever.

One could consider that some Soul minds have, for their own reason, either lost the ability, or chosen not to connect with physical bodies, they have an agenda to stop the Mind of God from manifesting. It can be understood mathematically.

Initially, the process of Soul maturation to individual godhead would be very slow. Those enlightened Souls, by the nature of the realm of Souls, (as depicted in the Flower of Life), will have some influence on the Souls around them. This slow and gradually increasing number of units, (Souls), is represented mathematically in a graph that demonstrates exponential growth. Eventually a tipping point is reached, a threshold beyond which, the affect that so many Enlightened bodies have on their surrounding medium, powers the full manifestation of exponential increase. It is around

this point that those Soulminds that have done their best to resist this ultimately and unavoidable mathematical reality from occurring lose their fight. They will have no choice but to become 'White Light', an effect of the affect of their surrounding medium. All daemonic and otherly defined 'negative' influences attempting to stop this from occurring, are transformed, losing the existence they have maintained for as long as they could. Possibly they knew exactly what and why they did what they did, they were uncaring of others (other Souls and the bodies they chose to dimensionally interact with). They represent the more sinister and unhealthy aspects of the world we live in. No one human chooses to be evil, choice is within the mind, and the mind is at the effect of past experience that goes back further than the first appearance of life on this planet as we perceive it. Remember, we perceive with our mind/body..... dimensional and non dimensional realms interacting 'in concert'.....a constant interplay of information flowing between mind and body, a constant two directional feedback mechanism flowing through our DNA that is intended to be harmonic, although sometimes it sounds a bit like discordant Jazz.

Multi dimensional considerations are, by my understanding, a manifesting of empirical material scientists that deny the possible existence of the mental realm of Mind, their minds are closed to possibilities that could and should be considered. Multi dimensionalism is suspect. There are reasons that explain their Mindset, the paradigm they stay with and cannot free themselves from. We are all on our journey through life and it is wrong to condemn someone for their beliefs, and a belief is what it is. (There is a chapter on Belief Systems later) Belief is what they require to support their theories. Theories that will undoubtedly, like most all scientific theories of the past, return to the graveyard of past scientific theories. Science is about measurement. It is Newtonian. It can be most accurate and beneficial to the physical realm that our

bodies exist in. It can save lives and make life more enjoyable. It can also create many of the horrors and suffering experienced by many people, both past and present. Science depends on measurement. Measurement is a mathematical tool. It uses numbers. Without the maths underlying the science, science is just another quasi religious belief system.

Data that science produces is contingent. It depends on the context of experiment and can be manipulated and produced to demonstrate an intended purpose. Science is not the realm of absolute truth and needs to be regarded as suspect and uncertain, it needs to be understood for what it is. The true intention of its purpose is what? To improve the well being of man and all creatures on this planet? Is that the world we live in?

When I was a boy we were told that computers will make our lives so easy and comfortable and the world will be such a better place. It is not. On the one hand, they did not improve anything much in my life, more so to the contrary, on the other hand, however, they introduced the Internet and a phenomenal source of information available to 'all' (albeit somewhat suspect and with uncertain reliability), computers helped develop medical techniques, and a host of 'beneficial to mankind' stuff. This is life.. A journey through the mire of reality that confronts us at every moment. A constant decision making process that either facilitates and enhances life or acts to the contrary. And the decision making process occurs in the Mind. Mind, as opposed to Matter, is, as at this point in time, almost impossible to define.

Matter defines the dimensional realm. The Laws of Physics come from its study. Matter is composed of solid objects which themselves are compositions of smaller units of matter. The ancient Greeks invented the term, Atom. Until the quantum age arrived, all objects were thought to be built up of smaller solid units. A table is solid. A wall is solid, however, now we know better and the term

solid is now regarded as a relative term. Something is more solid than something else. It is not an absolute term of reference. Matter can be defined as 'condensed energy', so that even atoms can be reduced to their original constituents, energy. The forces involved in 'condensing energy' are immense, they were the forces manifested by the Big Bang. The same but opposite forces manifest as Black Holes. Physical dimensional matter (condensed energy) entering a black hole is affected by these forces, it returns to its original form, the condensed collection of waveform frequencies 'decondense' and return to the frequency realm of mental energy, a non-dimensional zone outside of the space/time realm of the physical Universe. The non-dimensional realm is non-local. Consider it beyond quantum. It is the other dimension. An unimaginable universe infinite in itself. A singularity which is beyond comprehension but not beyond rational consideration. According to Leibnitz, who was Newton's antithesis, the non-dimensional realm is a realm of First Causes, He defined them as Monads, it is also said he defined them as Souls. I chose the term Monadic Soul to refer to them in this work. Leibnitz was a genius, a book about him by Macdonald Ross is well worth the read. Wikipedia delivers not a bad account of his life, however they, like most, only comment on his conventional work. He never officially related the monad to the Soul, it would have been heresy in its time, and the Church would have killed him. [bless them]. He was also a mover and shaker of his time. Travelling between the courts of Germany, France, Austria and Russia in the late 17th century...a phenomenal mind of invention... he invented calculus as we know it today, his mind moved into incredibly small spaces, and the mathematical greats that followed him, especially Euler, followed his principles paving the way for arrival of the quantum age.

I have digressed....I found that understanding reality as it has been taught to me, created a lot of conflict and uncertainty. Even

Einstein's two major theories, Relativity and Quantum Mechanics are mutually exclusive, either, one of them is wrong or possibly, both are. Conventional science stipulates that Mind is an emanation of Matter. I.e. matter pre exists mind. Conventional understanding starts with applying Newtonian science to the information available. It is empirical and only relates to the physical dimensional realm of existence.

Despite (over 100 years ago) Einstein proving that Newton was wrong on all counts, Newtonian science is still taught in schools today. I do understand and have some respect for Newton, despite all his alchemical splurge, he was a great Mind of his time.

Not all schools teach the same subject matter though... I was surprised to learn quite recently that many schools with Maths, only teach about the x, and y axis in Graphs... The kids are not presented with the z axis...Actually I was shocked. How can you understand three dimensionalism if only two are demonstrated? Depth of understanding must be stifled accordingly. I was equally shocked when I found out that even when I was at school this mode of double teach was also a reality. Dumbing down has been going on for quite some time...

Eventually I came to understand more about Plato and those who followed his understanding that the realm of Matter is an emanation of the world of Mind. Mental non dimensional energy is the precursor to physical matter and dimensional energy.

Slowly a more rational framework for understanding reality developed in my mind.....I came across the works of Leibnitz the German mathematician, philosopher and pretty much, all round genius. He invented calculus....a more efficient version than Isaac Newton's, which held back English mathematicians for more than a century until they had to switch to Liebnitz's because the European mathematicians were advancing theories way ahead of the English. I was most fortunate to stumble across the works of Viktor Schauberger, from Austria, a true genius. Schauberger was a free

thinker who did not want his mind shackled by the convention and academic status quo. It was his vortex theories that germinated the insight into DNA being the 'machine' of life on this planet.

I first came across the Zero Point Field Theory in the early 1990's. Around that time I was trying to understand "Molecules of Emotion" by Caroline Myss. Everything has to have a rational explanation... Everything. ...Magic is only something we perceive that we do not understand. There is always an explanation. How can a molecule think.? What mechanisms are there within the atomic structure and space between the solid aspects of the atom that enable ideas, realisation and understanding to emerge from these solid particles flying through a sea of waveform frequencies...? There is no vacuum within any atomic structure, the whole of space is filled with something...and Einstein demonstrated that removing the 'space' between all the solid particulate matter of the physical body, would leave a solid body small enough to fit on the head of a pin. However it would have the mass equivalent to the weight of the body before it was exposed to this theoretical act of hyper 'Dyson' suction. My 'pinhead' solid mass would weigh about 75 kilos..... Then I came across Rheimann, German mathematician of the mid 1800s. He demonstrated how one point can connect to all points in the dimensional realm..... demonstrating how the single Monadic Soul could connect to all of the cells in the physical body through the DNA. My mind was yearning for the one thing I needed to tie everything together....it came in a relatively simple statement from my nephew's wife. Carbon atoms like to form hexagonal structures which are quite stable.... In chemistry it is the skeleton of organic compounds, the Benzene Ring...It was never suggested that it was the precursor to life on Earth as we know it... however, for some reason life on this planet is defined as carbon based....

Then I came across the mathematical proofs that appeared to substantiate my ideas and give them sufficient structure to become

possible truths...Fourier transforms and inverse transforms... transforming non dimensional information to dimensional and vice versa. For example, dimensional information in the form of sound is picked up by a microphone and transformed by the inner workings of the microphone into electrical information which travels either by wire or wirelessly[Fourier Transforms]. The receiving apparatus, the loudspeaker, converts is back into sound [an Inverse Transform]. DNA does the same thing most efficiently. Information from the dimensional realm is relayed to the non dimensional mind, facilitated by microvortices generated by the DNA molecules themselves....the information is processed, a decision made and information is relayed back to the cell which responds accordingly.

Information relayed to the DNA via a variety of receptors within the cell and located in the cell wall is then vortexed through the zero point field back to the Monadic Soul Mind that it is connected to. Control of the cellular environment is non local, it is the Monadic Soul Mind that is processing the information, it is where the decision making process occurs. Single cell organisms cannot, by definition, have nerve cells or a brain, they maintain life processes most efficiently. They have DNA, it facilitates and enables the control of their life processes.

Life is the interaction and interrelationship of this process of dimensional and non dimensional information exchange.....

And so here we are, about to embark on a journey.....
and the destination?

Mind and Matter. Introduction Part 1

Life is a process that involves the exchange of energy and information between the realm of Mind and the realm of Matter. DNA is the chosen molecule that enables life to manifest on this planet. It facilitates the flow of energy/information between the two realms.

Existence, as we experience and understand it is a combination of the mental activity of mind processing information that originates in the realm of matter (the physical living cells of the organism) and enters the realm of mind through/via the micro vortexes within the DNA molecular structure in the cell nucleus.

The realm of Matter is made up of atoms and molecules which interact to form the variety of solid/liquid/gaseous substances that make the physical world as seen and understood by our senses. Einstein demonstrated that 99.9% of solid matter is in fact not solid at all. All solid material in the physical realm of matter comprises of bodies with mass, ie electrons, protons and neutrons. (Just to complicate matters, conventional science has more than one definition of mass enabling the previous statement to be challenged, don't go there, all the information presented in this work is designed to develop and further the readers understanding, not to present them with an opportunity here and there to challenge the odd statement because of apparent inaccuracy or inconsistency). This work is a combination of words and concepts designed to paint a picture in the mind facilitating the understanding of other information that the reader has ingested, digested, and subsequently accepted, rejected or put on the shelf for future consideration. An atom is a substance that occupies physical space. Most of physical space is empty of solid matter (depending on the definition of 'solid', ultimately one could say that nothing is solid, it is a relative term)....

ie the electrons, protons and neutrons that make the atom what it is, are the only solid aspects of the atom, they are incredibly small and only take up 0.01% of the physical space that the atom occupies. A conventional model is that the electrons spin around the centre of the atom where the protons and neutrons reside. The orbit and number of electrons define the size of the atom. Conventionally, atoms interact with other atoms through sharing or exchanging electrons and generating and manifesting 'forces' that, once given a name, become 'real'. eg Van Der Waal forces, nuclear forces, electromagnetic forces etc.....Two or more atoms combined/joined together by such forces and electron sharing, produce a substance called a molecule. Most solid matter on this planet is molecular in structure, most substances are molecular forms of combined atomic structure.

Electrons protons and neutrons have mass, that means they can be weighed and measured, a photon is not made of electrons, protons or neutrons and hence has no mass. Mass relates to scientific materialism which explains the material dimensional realm as the only realm of existence, Newton having taken mind out of the Mind/Matter dualism, leaving only matter to be discussed, analysed and experimented with. Scientific materialism gained momentum throughout the nineteenth century and was supported by the rise of capitalism. Until near the end of the nineteenth century, psychology was the study of Mind and Soul, it was hijacked predominantly through the involvement of the Rockefeller foundation funding and creating a form of psychology that does not truly regard mind as an existent, culminating in the publishing of the first American Journal of Psychology in 1917

Mind exists within the non dimensional frequency realm of waveforms.....

Sine waves and cosine waves, ie sinusoidal waves, make up the whole physical universe. The difference between the two is the point where they are measured from.

It is written that sine waves correspond to space and cosine waves correspond to time, (or is it vice versa?), consequently, the non dimensional waveform, outside space/time, must develop dimensional characteristics when traversing the zero point field.... Or does it?Maybe it is a combined sine and cosine wave that becomes dimensionalised in the form of an electromagnetic frequency. I am no expert in this field.

For sure I do not have all the answers and there is a lot to be discovered once we can embrace or at least consider the information contained in this work. At the same time, I have read that this information is known. There is scientific development out there that developed a technology using this information and that, for example was used in the development of the X15 experimental plane built in 1963 and it still holds the air speed record of in excess of 15,000 miles an hour to this day, or at least that is what we are told.

Trying to keep the mind open and fueled with accurate information is a truly difficult task in this day and age.....

B1 Conscious self is a human mental construct.

It is transitory and manifests in the physical body. Spirit Self is the non dimensional counterpart of our physical body and the memories/storage of information accumulated during the lifetime of the physical body. They are both mental constructs and thus are emanations of mind. There is conscious mind, spirit mind and SoulMind. They are all interconnected to some extent or another, ultimately they are transient. The only immortal aspect of existence is the Soul. Soul generates the concept of mind, Soul is the 'container' of SoulMind. SoulMind is totally unconscious. It is beyond Conscious Mind's ability to connect with SoulMind, except in the case of those individuals we refer to as Psychic.

Conscious Mind connects with Spirit Mind. Spirit Mind is layered, its more inner layers connecting to SoulMind. This is an evolutionary development, the earliest life forms having little or no spiritual impression in the non dimensional realm. They recruited the memory of SoulMind and did not have their own. SpiritMind has memory of the physical incarnation it is/was attached to. Subconscious mind is within SpiritMind. It affects our decision making process unconsciously and has a variety of conflicting agendas that are established mainly during our early life. These early agendas and programmes are more difficult to overwrite later in life when we realise that we have developed habits and behaviours we do not really want to exhibit. Changing them is not easy, however, trauma at any time of life can establish new high priority agendas within the unconscious mind and new programmes can be established. Past life memories too, if they were sufficiently traumatic can impinge on present life behaviour through SpiritMind's connection with the SoulMind. Significantly traumatic memory of sexual abuse from a previous life can affect the developing conscious mind of an individual, as could either death or serious injury from a previous life. Past life memories are real.

There is a lot of information out there that is worth at least some consideration by those sceptical of this reality. Muscles have memories, very young children have memories of past lives, not necessarily traumatic... Keeping an open mind on such matters is a good idea if one wants to have a healthy mind and body in older life.

Conscious self is, by definition, not present at birth, however its potential existence is in the programme of the human form. Possibly some form of conscious mind is present at birth, we have to learn about self and identity. Although not the same, it is our cognitive state of awareness on a daily basis perceiving reality in real time, this is what I refer to as Conscious Self. It experiences 'the now'. We are taught that it is in our head, a product of the brain.

Back in the day, touring with Jimmy Sommerville, was the first time I became aware that some people do not locate their sense of self in the head. My wife at the time kept pointing at her heart when she referred to herself. I pointed at my head and said "we are here", she told me that she felt that she was located around her heart area. That got me thinking. So, as it happened later that day, I went to Heaven, (a Gay club underneath Charring Cross Bridge, in London). I asked some of the people working on the tour and a few people who had come for the concert, where they thought they were located in their body. (mainly men, not surprising at the time considering the environment). Several said the same thing as my wife. Many homosexual men are more sensitive than their heterosexual counterparts for a few reasons, one of which is their connection to their inner levels of relative consciousness.

Attempting to define consciousness it should be considered (and realised) that it is relative to unconsciousness. Consciousness expands into the unconscious until, ultimately, the mind, itself an emanation of Soul, is fully conscious. The journey of the Soul is completed and it is fully enlightened. This journey can be

represented symbolically, eg alpha to omega or zero to infinity, or we can use words to represent it. From Unknowing to Knowing, from ignorance to divinity, unconscious to conscious.. The intention is facilitate an understanding of the process that defines purpose and reason, the entelechy and teleology underlying existence.

Subsequently, after much more questioning, I was relieved, at the time, to find that most people consider that they sense of self is located in their head...I have since learnt better...

Developmental life experiences determine the degree of consciousness that the individual will attain during its lifetime. Parents who provide a comfortable safe loving environment for the infant enable it to be able to receive, handle and process information efficiently. This in turn enables the mind to understand more and increase its ability to process information. If the parents also provide a variety of stimulation and positive feedback/reinforcement, then the infant will develop its understanding quicker.

At the same time it is also trying to establish its Will to Power (Neichtze) and attempting to control its environment including parents and other humans that it interacts with. It is learning life skills that it will use in the future. The more vocabulary that the parents present to the infant, the more information is given to the mind to process, and its understanding will develop accordingly.

The greater the vocabulary, the more able the individual is to describe more accurately whatever it is that it is trying to communicate to another human being. Limitations and misunderstanding occur because all too often, the listener has a more limited vocabulary and consequently their understanding will be affected accordingly.

Either you understand what is just written or you need further clarification to understand the concept. This does not mean that those who do not so easily understand stuff are more stupid or ignorant. Not at all. We are all at the effect of this process, familiarity with the subject discussed is one factor and the more one

understands Mind and how it functions and operates, the more one realises the truly subtle nature of interactions that are occurring within it at light speed or faster. I say faster to remind one of the concept that Mind is outside space time and Conscious Self cannot fully conceptualise this and can only attempt to understand it rationally.
